

ORACLE ENTERPRISE SINGLE SIGN-ON SUITE

Oracle Expert Services

AT A GLANCE

- Scope and project planning
- Analysis and design of deployment architecture and strategy
- Implementation of a production-ready solution
- Knowledge transfer activities

The Oracle Enterprise Single Sign-On Suite is an event-driven solution that helps to enhance the benefits of single sign-on to virtually any Windows, Web, Java, proprietary, or host-based application without requiring scripts, application server agents, connectors, or any modification to the target application. The Oracle Enterprise Single Sign-On Suite service offering is a four-week offering designed to help you establish a plan to best architect and deploy your enterprise application security architecture. This approach facilitates easy configuration, deployment, and administration and helps provide a quicker return on investment.

Overview

The Oracle Enterprise Single Sign-On Suite is a four-week engagement designed to provide you with a “sandbox” development environment configuration. It begins on the business side—discussing your goals, drivers, requirements, and strategy in the area of identity management—and concludes with the technical components—identifying the gaps and potential risks in your current architecture. The resulting information allows you to establish a plan to best deploy and architect your enterprise application security architecture.

Oracle consultants have the experience to help you to understand your business requirements and the expertise to map them into the appropriate architecture for your identity management integration needs, following Oracle and industry best practices. We perform this service in a development environment that you can leverage for validating business and technical requirements.

Scope of the Offering

We deliver the Oracle Enterprise Single Sign-On Suite offering in the following phases:

- **Inception: Scope and Project Planning.** Once we understand your business drivers and enterprise application security requirements, we can better analyze your current identity management integration mechanisms. We can help you understand how Oracle’s identity management strategy and technology can better fit into your existing and future environments. The Inception phase is intended to transform these requirements into a finite scope and an actionable plan.
- **Elaboration: Analysis and Design of Deployment Architecture and Strategy.** Oracle Consulting will deliver a high-level work plan based on a

recommended architecture and strategy designed around Oracle and industry best practices to implement a solution that is intended to be secure, compliant, and cost-effective. .

- **Construction.** Oracle Consulting will install the Oracle Enterprise Single Sign-On Suite on your development system and include functionality for components such as Logon Manager, Provisioning Gateway, Authentication Manager, Kiosk Manager, and Password Reset.
- **Transition: Enabling of the Customer through Knowledge Transfer.** Oracle Consulting will work with your team to perform project testing and carry out training and information transfer activities for a smooth transition.

In addition to the above, Oracle Consulting will interact with your IT management and staff through each phase to help you develop a comprehensive plan for maintaining the Oracle Enterprise Single Sign-On Suite.

Requirements

- Supported development environment for Oracle Enterprise Single Sign-On Suite, including Windows 2003 SP1 or Windows 2000 SP2
- Pre-installation of target application for single sign-on

Deliverables

- **Deployment and Demonstration:** Installation of Oracle Enterprise Single Sign-On Suite, configured to target application with password reset enabled.
- **Presentation and Roadmap:** The Oracle consultant will present the findings in person to a limited audience (determined prior to the engagement) at your facility.
