E - BUSINESS LEADER AND INNOVATOR

Oracle Corporation is the world's largest relational database provider, a distinction gained within a year of its founding and maintained for over a quarter of a century. Oracle is also the world's leading provider of application software, application servers, tools, support and education services. With over 200,000 customers, including 98 of the Fortune 100, Oracle operates in more than 145 countries.

Oracle's leadership position in the marketplace is directly due to its impressive record of technical innovation and firsts. Oracle was one of the first companies to make its business applications available through the internet and one of the first to commit to making sure that all its software is designed to work together, thereby minimizing software integration costs while increasing reliability. Oracle has also focused on simplifying customer systems and providing complete solutions, allowing customers to gain access to better data while spending less.

From the beginning, Oracle's success has come from its commitment to technological innovation combined with unparalleled product quality. Both are essential to ensuring the continued success of customers and technology partners alike.

Business Essentials

Oracle Database 10g offers small and medium businesses fast, simple installation and extensive self-management. For large enterprises, Oracle Database has advanced features such as clustering. Only Oracle runs on every popular platform including UNIX, Windows and Linux.

Oracle Application Server 10g offers the industry's fastest, most complete and integrated J2EE-certified application server. It has revolutionized the fast-growing application server market by being first to integrate all the technology required to build and deploy e-business portals, transactional applications, and Web services in a single product.

Oracle E-Business Suite is a complete set of business applications that lets you efficiently manage customer interactions, manufacture products, ship orders, collect payments and more—all from a business system that shares a single technology foundation. Oracle is the only applications vendor to provide a unified information architecture to enable you to know more, do more, and spend less.

Oracle Collaboration Suite is the first product that leverages a relational database to offer a secure, reliable and scalable way to simplify communications and consolidate information. Oracle Collaboration Suite provides a complete set of enterprise-class messaging and collaboration applications that allows organizations to reduce total cost of ownership and increase productivity.
