### Oracle Products & Services:

Oracle Adaptive Access Manager

**“As an on-demand service provider, we required a security solution that could integrate seamlessly into our network infrastructure and would not interfere with our users’ online experience. Oracle Adaptive Access Manager is the only security solution on the market that met both our customer and internal objectives.”** – David Fox, President and Chief Executive Officer, Agistix, Inc.

## Agistix, Inc. Provides Additional Layer of Security to Online Transactions without Sacrificing Performance

Agistix, Inc. is the leading provider of on-demand, carrier-neutral global logistics management solutions that enable companies to gain visibility and control of their global shipment process.

Agistix is the first vendor to deliver on a new vision for enterprise-class, global transportation solutions: Logistics Management Automation (LMA). Agistix LMA bridges the gap between optimized transportation plans and day-to-day global logistics activities that occur with any number of carriers across all modes of transportation.

### Challenges

- Implement a solution with the ability to provide an additional layer of security to protect customer shipping data without impeding the user experience
- Minimize the impact of the security solution deployment on engineering resources and the company’s network infrastructure

### Solution

- Deployed Oracle Adaptive Access Manager to create a solution that provides strong security without having a negative impact on application performance or usability
- Increased security with the capability to verify multiple factors—such as the user’s computer, location, and online behavior—to confirm user identity
- Enabled seamless interoperability with existing IT architectures and systems, allowing the company to manage the implementation and ongoing system maintenance with very little dependency on its development team and minimal network infrastructure changes
- Elevated customer confidence in the company’s ability to ensure the security of confidential shipping data, increasing customer satisfaction
- Gained the ability to address customer security concerns during the sales process, reducing the time required to convert an opportunity into a customer
- Minimized business disruption with a rapid and seamless implementation, which the company completed in less than eight weeks
