Oracle Consulting

“Since our inception, Oracle’s PeopleSoft Enterprise applications have supported our development initiatives—enabling us to more effectively compete in the market and extend our processes to our clients and partners. We greatly appreciate the applications’ power and ease of adaptation.”

– Luc Schmitt, IT Application Maintenance Manager, Altis Semiconductor

Altis Semiconductor Improves Operational Efficiency and Bolsters Strategic Development

Altis Semiconductor, formerly a production company of IBM, is a major player on the semiconductor market in Europe. Founded as a separate company in 1999 and a joint venture of IBM and Infineon, the company specializes in the manufacturing of state-of-the-art electronic components. Altis Semiconductor is at the forefront of technological innovation—offering increasingly high performance services to its customers.

Challenges

- Implement an IT solution to support the company’s objectives—management independence, market expansion, and commercial development
- Ensure 24/7 availability of critical management processes, particularly in the areas of production and strategic data
- Reinforce interactivity with clients, partners, and shareholders

Solution

- Worked with Oracle Consulting to implement Oracle’s PeopleSoft Enterprise applications for financial, procurement, production, and distribution management
- Established an automated and high availability production chain, enabling the company to process 70,000 daily transactions as a result of the integration with the existing Manufacturing Execution System (MES) tool
- Incorporated the company’s strategic orientations into production management
- Optimized the distribution chain with Oracle’s PeopleSoft Enterprise Supply Chain Management
- Deployed Oracle’s PeopleSoft Enterprise Performance Management to 2,000 staff and sub-contractors—allowing users to conduct stock analyses and forecasts, collect procurement and financial results, and monitor performance indications
- Migrated to the full Web version to optimize benefits, in terms of development and maintenance
- Enabled the company to uncover solutions for clients, supplier partners, and shareholders
