ATEQ Accelerates Production Cycles by Two Weeks with Integrated Oracle Applications Suite

A specialist in quality control automation, the French ATEQ group designs, manufactures, and markets measuring devices for industries and laboratories. These testing devices cover leak detection, flow, pressure, volume, and electrical testing. Founded in 1975, ATEQ has become a world leader in the industry, selling more than 2,800 devices each year. ATEQ is active in 32 countries worldwide through 19 branch offices and a dozen local representatives. The group today has 4,000 clients worldwide.

Challenges

- Centralize financial information for the group's 19 entities worldwide
- Eliminate lack of standardization in the quality standards, production, and processes used within the group
- Gain access to real-time information about the business
- Speed all operational processes, including financials, sales, manufacturing and shipping

Solution

- Deployed Oracle E-Business Suite, establishing a comprehensive, integrated approach to managing financials, manufacturing, sales, purchasing, and customer service
- Created a standard management model that facilitates the dissemination of information and good business practices
Accelerated production cycles by two weeks with Oracle Discrete Manufacturing and Oracle Configurator
- Gained ability to process orders more quickly and reliably using Oracle Configurator, which automatically enters customer's precise requirements and transforms them into parts lists
- Enabled faster reactions to changing internal and external conditions through real time visibility of finances and continuous performance measurement
