China Development Bank Lowers Operating Costs

China Development Bank was established in 1994 by the State Council of China to support national economic development. In the past decade, as China's economy has boomed, the bank has provided CNY 1.6 trillion (US\$190 billion) in loans to more than 4,000 projects, including infrastructure construction and industry development. Headquartered in Beijing, the bank has four offices and 32 branches across China.

Challenges

- Establish an open, integrated, and scalable business management platform to support efficient operations and robust decision-making
- Create a performance management system to help senior officials monitor and understand the impact of their decisions
- Improve productivity and lower costs by standardizing workflows according to best-practice guidelines

Solution

- Ensured data consistency and availability and ease of collection and storage by creating a single, integrated information management platform with Oracle Database
- Enhanced business intelligence by enabling accurate, up-to-date information to be shared across different business units
- Improved productivity by providing managers with a core performance management system based on Oracle's world-class applications for the financial services sector
- Increased operational efficiency by standardizing workflows and consolidating accounts according to international standards
- Lowered operating costs by gaining tighter control over financial operations, including transfer pricing, cost sharing, profit analysis, planning, and budgeting
