Oracle Consulting

“The introduction of Oracle E-Business Suite applications has simplified controlling and made it more consistent and transparent for all levels. We have been able to greatly improve our reporting, as well as successfully implement and model our structural requirements for the corporate organization.” – Christian Kämper, Member of the Managing Board, CDM Consult Holding AG

CDM Consult Holding Enhances Project Management Visibility, Leverages Global Resources

CDM Consult Holding AG, a subsidiary of Camp Dresser & McKee Inc., provides environmental and geotechnical consulting and design services in Germany. CDM Consult Holding AG’s broad capabilities include consulting, planning, construction management, and project management, as well as field and laboratory services for environmental, water, infrastructure, and geotechnical projects.

Challenges

- Increase transparency by providing the American parent company with access to joint applications
- Replace self-developed applications for project controlling and time recording
- Replace three non-integrated DATEV applications for financial bookkeeping
- Deploy global project applications to streamline operations and enhance communications
- Improve reporting accuracy

Solution

- Worked with Oracle Consulting to implement Oracle Projects and Oracle Financials in one year to establish a highly reliable and cost-effective project management and financial application infrastructure
- Added three new legal entities of the financials and projects modules on the parent company’s existing production platform
- Implemented a customized down payment solution to streamline operations and improve status visibility in Oracle Projects
- Simplified information access by consolidating key financial information in Oracle Financials
- Created an invoice ledger to simplify operations
- Allowed the organization to generate reports to meet project evaluation requirements set by CDM USA
- Capitalized on the application investment by training 150 project managers in Germany to optimize the system for project and financial requirements
