“Oracle’s solutions have enabled us to define a unique database. As a result, we have improved our monitoring capabilities—allowing us to eliminate duplications within our social programs.” – Marco Arturo Leyva, Information Technology Director, El Consejo Nacional de Evaluación de la Política de Desarrollo Social

CONEVAL Integrates Information to Improve Delivery of Social Programs in Mexico

Consejo Nacional de Evaluación de la Política de Desarrollo Social (CONEVAL) is a public sector organization responsible for evaluating the impact caused by the social and human development programs sponsored by the government in Mexico. In addition, the council, coordinated by the Ministry of Social Development, evaluates more than 170 of these nationwide programs every year, which reach approximately 40 million individuals.

Challenges

- Ensure operational efficiency of Mexico’s social programs
- Establish a unique database based on the criteria and features used for the definition, identification, and measurement of poverty in Mexico

Solution

- Implemented Oracle Database to create a comprehensive repository containing an inventory of federal social programs, which reduced management costs while providing the highest possible quality of service
- Implemented Oracle Portal to establish a reliable and convenient way for council employees to retrieve pertinent information online
- Facilitated the analysis of information from external sources to properly evaluate national poverty indicators
- Improved the ability to monitor and evaluate the effectiveness of the country’s social programs
- Provided a highly integrated and simple application development, offering unparalleled productivity with JDeveloper
