“Contaduría General de la Nación has achieved operational success thanks to its effective, Oracle-based technology infrastructure and strong support for both its servers and databases.” – Renzo Bernasconi, Director of Systems Division, Contaduría General de la Nación

Contaduría General de la Nación Integrates Systems in a Scalable and Flexible Technological Infrastructure

Contaduría General de la Nación is the branch that controls the budget management of Uruguay’s central government. It emerged as a system consolidation center for the entire administration, with the purpose of centralizing the financial and accounting information from all of the central administrative ministries of the state of Uruguay.

Challenges

- Integrate and centralize financial and accounting information systems in a scalable and flexible technological platform that guarantees the adaptability of the system to modifications, adjusting to the legal and budgetary changes of the country
- Centralize dependable and highly available financial information for enhanced operational visibility within the state’s ministries that form the central administration
- Accelerate analysis of financial information in order to achieve effective decision making by the central administration

Solution

- Worked with Tilsor S.A. to establish a solid technological infrastructure, unifying all of the central administration’s systems in a flexible and scalable platform
- Implemented Oracle Database Enterprise Edition to integrate a large volume of information in a single database
- Centralized financial information with Oracle Application Server Enterprise Edition, implementing an Integrated System of Financial Information (SIIF) that facilitates the registration and visibility of critical information online and in real time to 3,000 users, through a WAN network with more than 100 access points in the country
- Accelerated the process of data analysis and production of high quality financial reports with Oracle Developer Suite and its components, Oracle Forms and Oracle Reports, allowing for better decision making by the central administration
- Established the foundation for a future data warehouse that will allow the optimal use of the data of the organization’s diverse operational systems
