Oracle Consulting Services

**Egyptian Social Fund for Development Relies on Real-Time Business Intelligence to Achieve Vision**

The Egyptian Social Fund for Development (SFD) was established in 1991 in support of the Egyptian government's economic reform and structural adjustment program. Now under the chairmanship of Egypt's prime minister, SFD's main objective is to fund national projects that help alleviate poverty and combat unemployment by facilitating the creation of job opportunities, as well as promoting and enabling an environment for human development.

**Challenges**

- Automate critical business processes to improve accuracy and streamline efficiency
- Achieve real-time business intelligence in order to more effectively support the organization's mission of combating poverty and unemployment
- Increase transparency by creating an integrated IT infrastructure that links remote offices with headquarters, giving central management a real-time, single source of accurate information and improving the decision support process

**Solution**

- Deployed Oracle Financials to accurately manage and provide real-time visibility into financial transactions for donors, sponsoring agencies, non-governmental organizations and beneficiaries, and to help move SFD from a cash-based system to an accrual-based system
- Automated human resources activities such as payroll, career management, training, and benefits by deploying Oracle Human Resources application
- Implemented Oracle Projects to improve control over projects, increase transparency, and reduce operating costs by integrating all of its financial operations
- By deploying Oracle's Enterprise Asset Management, SFD improved the management of all maintenance activities and improved procurement and inventory management by deploying Oracle's Purchasing and Inventory Management applications
