Oracle Database  
Oracle Portal

**“The Oracle platform offers the guarantee of stability, reliability, and performance that Eurogroup needs to support the growth and development of small and medium enterprises in Italy.”**

– Giuseppe Todaro, Information Systems Manager, Eurogroup

**Eurogroup Ensures Stable and Secure Network Interaction Across 34,000 Member Enterprises**

Eurogroup was established in 1999 to provide small- and medium-sized enterprises with credit and corporate consulting services. The company now operates through two entities: Eurofidi, which provides enterprises with improved access to bank loans; and Eurocons, which offers consulting services for special forms of financing, product and system certifications, corporate strategy, and professional development.

**Challenges**

- Have only one database for Eurofidi and Eurocons
- Reduce time for financing authorization
- Provide an IT platform capable of tight integration with other legacy systems
- Guarantee stability and flexibility of the IT infrastructure
- Provide easy, quick, and secure information access also to employees without technical skill

**Solution**

- Ensured the stability and security of Eurogroup’s data infrastructure with Oracle Database
- Enabled successful interaction between Eurogroup and 34,000 member enterprises served by a network of 26 offices in eight different regions
- Enabled the registration of more than 8,000 companies on the new Oracle-based portal [eurogroup.it](http://eurogroup.it)
- Enabled more than 1,500 companies to create their own Web pages in the portal for increasing their visibility
- Simplified and optimized financing authorization’s processes using the Portal and intranet
