**“Like any professional organization, Group S looks for solutions to improve operations and customer service. We selected Oracle E-Business Suite because it offers comprehensive and user-friendly solutions, which can be implemented one-step at a time. It enables us to grow at our own pace.”** – Gonzales Stubbe, General Manager, Group S

## Group S Streamlines Business Operations and Ensures Scalability to Support Future Growth

One of Belgium’s most important social services providers, Group S offers social services (social secretariat; payroll management; HR management; family allowance funds; assistance in social law; medical services; and services in prevention, protection, and well-being at work) to more than 77,000 organizations and self-employed people. The company operates 32 offices around the country and serves nearly all industrial sectors, with a strong concentration of customers in the construction industry.

### Challenges

- Standardize the company’s financial and procurement processes to improve operational efficiency
- Improve visibility of financial information from across the company to drive more informed decisions
- Create a scalable IT infrastructure that can grow with the company

### Solution

- Implemented Oracle Financials and Oracle Advanced Procurement to create an integrated and scalable financial infrastructure that enables Group S to use real-time information to improve financial management and customer service
- Standardized financial processes to ensure agility and decrease time spent verifying information (reduced errors and manual effort)
- Improved and accelerated decision-making processes
- Worked with RMC, an Oracle partner, to ensure a seamless and on-time implementation
