Oracle Consulting

“Oracle understands the manufacturing requirements and needs of the food service industry. In addition, Oracle actively participates throughout the deployment process, ensuring a smooth implementation.” – Nuria Loriente, Information Technology Director, Incarlopsa

Incarlopsa Optimizes Business Efficiency through Improved Information Management

A family-run business founded in 1967, Incarlopsa produces 300 varieties of fresh, cooked, cured, and salted pork, veal, and lamb products from its plants in five locations in Spain. In addition to its own brands (Incarlopsa and Sierramón), the group produces white-branded products for the Mercadona supermarket chain, and is the fifth largest industrial meat supplier in Spain. Through the Montefrío company, Incarlopsa runs a stock raising operation of 2,500 head of cattle and 5,000 sheep for its own supply. The company holds steadfast to delivering strong quality service and product variety in its endeavor to satisfy the fresh meat requirements of its clients.

Challenge

- Ensure accuracy and timeliness of information to support business expansion
- Improve decision making
- Support traceability requirements and manufacturing quality controls

Solution

- Implemented Oracle’s JD Edwards EnterpriseOne applications (Financial Management, Manufacturing and Supply Chain Management) to enable real-time access to information, enabling more informed and agile decisions
- Automated and integrated mechanical production processes, facilitating stock and cost control
- Enabled configuration and implementation of financial, sales, and distribution models, providing real-time information enabling a rapid response to changing market conditions
- Integrate financial, commercial, and production management data to drive more informed decisions
- Enabled Incarlopsa to adapt to new business models and European Union requirements (such as health and safety restrictions for exporting) thanks to the flexibility of the JDE EnterpriseOne software
