“Choosing Oracle has been fundamental in making a leap forward in the quality of our corporate IT systems. Oracle is truly unsurpassed, even in a difficult environment like a warehouse and on a complex architecture like a WiFi network.” — Marco Casucci, IT Manager, Industria Vetraria Valdarnese

Industria Vetraria Valdarnese Increases Warehouse Efficiency by 50% with WiFi Solution

Industria Vetraria Valdarnese (IVV), founded in 1952, is the largest Italian company associated with hand-finished blown glass. With production of nearly 2 million pieces a year, half of which are exported around the world, the company is founded on an ancient glass arts tradition developed in the area between Florence and Arezzo, where artisan skills passed down for centuries are combined with the most modern technologies, production, and processing methods.

Challenges

- Increase competitiveness, efficiencies, and customer service levels by completely automating warehouse management
- Implement an update, stable IT system that is scalable and user-friendly
- Allow access to the network in WiFi mode
- Guarantee transparent integration with the company’s management operating system

Solution

- Used Oracle Database and Oracle Application Server to implement a WiFi network that connects the entire warehouse and transparently interacts with the company’s integrated management operating system
- Automated the warehouse management system, with particular emphasis on the “picking” activity, a complex operation involving 1,300 catalog items and more than 70 orders per day
- Reduced merchandise selection time by half and significantly decreased the margin of error
- Provided a secure, simplified system that is well received by employees
