**“With PeopleSoft Enterprise applications, we have created an information system to support our international development. We have also reduced the interfaces between systems and increased data reliability.”** – Eric Tirlmont, Partner, Ineum Consulting

## Ineum Consulting Improves Productivity and Operational Efficiency with Hosted IT Infrastructure

Created in 2003 via a spin off from Deloitte France’s consulting division, Ineum Consulting is a major, independent player in the strategic and operational consulting market. With full financial independence and backed by its 600 consultants, Ineum Consulting makes objective recommendations to its large corporate and small-to-medium-sized business clients. The consultancy has offices in France, Benelux, and the Netherlands.

### Challenges

- Create a standalone IT infrastructure that would enable the company to continue to expand internationally
- Improve financial management capabilities to drive improved performance
- Automate human resources management processes to drive administrative efficiency

### Solution

- Implemented Oracle’s PeopleSoft Enterprise applications for financial and HR management to create an integrated IT infrastructure in just five months
- Expanded visibility of critical financial and HR data across the industry, driving more informed decisions
- Automated core HR and financial processes, improving productivity
- Improved reporting capabilities, gaining the ability to quickly generate a wide variety of financial reports
- Reduced the need for interfaces between systems, driving down IT implementation and maintenance costs
- Reduced data entry and processing errors
- Improved consultant productivity as they can use the Web at their convenience to manage time sheets and expense accounts
- Selected a hosted approach, working with Business@Work to ensure system availability, predictable IT costs, and timely upgrades and maintenance
