“Our OLISYS system, based on Oracle, has made our operations far more effective. Oracle technology has supported us through each year of our operations.” – Samer Tadros, General Manager, Integrated Olive Products Company

Integrated Olive Products Company Improves Control and Production with Web-Enabled System

Established in 2001, Integrated Olive Products Company aims to make Jordan a leading producer and seller of high quality olive oil, both regionally and internationally. The company handles every aspect of production, including harvesting, cold pressing, bottling, and packaging.

Challenges

- Implement from scratch a Web-enabled technology platform to support all of the business processes involved in producing and selling olive oil, including financial and inventory processes
- Manage farmers’ ticketing procedures, which previously had been organized farmer-by-farmer

Solution

- Designed and implemented OLISYS, a Web-enabled, state-of-the-art olive-oil production and control system built on Oracle Database and Oracle Developer Suite
- Using the system to provide financial and organizational support, as well as an automatic ticketing system for farmers
- Automatically monitors the flow of raw material into the warehouse, improving storage procedures, reducing waste, and generating inventory reports
- Managed financial operations, ensuring accurate accounting and statements
- Calculated payments, improving financial efficiency, eliminating errors, and reducing paper-based administrative processes
- Improved workflow, boosting efficiency and reducing operational costs
- Provided fast and accurate financial reporting, including operational costs, helping to improve decision-making
- Enabled the company to become a pioneer in the use of technology in the olive-oil industry in this region
