

Les Aéroports de Lyon  
Lyons, France  
[www.lyon.aeroport.fr](http://www.lyon.aeroport.fr)

**Industry:**

Travel & Transportation

**Annual Revenue:**

US\$105 million

**Employees:**

470

**Oracle Products & Services:**

Oracle Data Integrator

**Oracle Partner:**

Idellys  
[www.idellys.com](http://www.idellys.com)

**“Oracle Data Integrator enabled us to work with several subcontractors on different interfaces while maintaining control of the work done and a single repository for all data movements in the corporate information system.”** – Pascal Deborde, Architect Manager of the Referential project, Les Aéroports de Lyon

**Les Aéroports de Lyon Rationalizes Data Management to Better Monitor Business**

Les Aéroports de Lyon, inaugurated in 1975, is the third largest national platform, and is now linked directly to more than 100 destinations. With markedly rising traffic (more than seven million passengers in 2007), Les Aéroports de Lyon is one of the largest employers of the Rhône-Alpes region.

**Challenges**

- Produce consolidated statistics to support and monitor the traffic increase
- Facilitate exchanges between the various production databases aimed at implementing master data directories.

**Solution**

- Worked with Idellys to implement Oracle Data Integrator, which easily integrated with the organization’s existing system
- Provided a centralized solution for exchanging data between software applications and supplying decisional databases with airport traffic and maintenance indicators
- Implemented an effective data administration strategy
- Automated data quality checks
- Cut costs associated with data management, due to the interface centralization
