MANAGEM Introduces New Business Efficiencies Using Integrated Technology

The mining and hydrometallurgical group MANAGEM produces and sells cobalt, base metals, and metal derivatives. It has a growing portfolio of exploration projects at different stages in Morocco and internationally. Committed to a policy of growth and development, MANAGEM aims to create added value through customer service, research, innovation, and excellent human resource management.

Challenges

- Reduce heavy system integration overhead related to cost and labor
- Introduce scalability; legacy technology was built on closed standards
- Improve reporting by establishing a single source of information across the group
- Introduce shared data sources and real time accuracy

Solution

- Introduced Oracle E-Business Suite applications, including Oracle Financials, to increase efficiency across the accounting business, automate business processes, and integrate data
- Improved decision-making and accuracy across MANAGEM through collaborative best practices using Oracle Purchasing
- Reduced the cost of technology ownership by integrating the system and reducing the number of interfaces
- Reduced the time and effort involved in manipulating data; improved reporting by establishing a single source of reliable financial data
