“We chose Oracle’s JD Edwards EnterpriseOne solution for its robustness, efficiency, and credibility. We were able to reduce IT costs by 35% percent, which was really good for our company.” – Daniel Garay,
Finance and System
Administrative Manager,
Petroquímica Cuyo

Petroquímica Cuyo Reduces IT Costs By 35%

Petroquímica Cuyo is Argentina’s first national capital company with focus on the production and sale of polypropylene. In 1985, a polypropylene plant was built at Luján de Cuyo Petrochemical Pole, in the province of Mendoza, and it started working by the end of 1988. The company's first goal was to contribute to the growth and strengthening of the polypropylene market in Argentina. Through the years, Petroquímica Cuyo has become a leader in technological innovation among Latin American polypropylene producers.

Challenges

- Integrate all company information onto a single platform for greater efficiency
- Improve processes and technology to achieve efficient inventory management
- Reduce IT costs and generate reports faster and more easily
- Eliminate interfaces between systems

Solution

- Implemented Oracle’s JD Edwards EnterpriseOne financial solution, integrating all financial information from different sectors of the company
- Delivered fast access to all data
- Reduced IT costs by 35% percent
- Improved inventory control and replenishment of supplies with JD Edwards EnterpriseOne Inventory Management
- Used JD Edwards EnterpriseOne Production and Distribution Planning modules to develop better business practices and build a more competitive platform in Web and client-server environments
- Eliminated interfaces between systems, facilitating users’ work and reducing access time to pages
- Collaborated with InfoConsulting Group to implement the solution quickly and within the group’s budgetary constraints
