“Oracle provides the technology we need to be more responsive to clients and answer their questions as quickly as possible. When we tell clients or potential clients that we use Oracle Clinical, it raises their confidence in our ability to successfully support their clinical trials.” – Jorge S. Batista, Associate Director, Global IT Operations, Premier Research Group Limited

Premier Research Group Limited Supports Clinical Trials with Consolidated, Less Costly IT System

Premier Research Group Limited is a leading solutions-driven contract research organization committed to therapeutic focus and operational expertise to deliver clinical trial services for biopharmaceutical and medical device companies. Premier Research offers a comprehensive selection of services including dedicated clinical sites, clinical trial management, medical and safety management, data management, biostatistics, medical writing, interactive voice response systems, regulatory affairs, quality assurance, functional sourcing, and strategic product development.

Challenges

- Leverage technology to be more responsive to clients, ultimately helping clients improve their clinical trials and increasing client satisfaction
- Consolidate numerous geographically-dispersed clinical systems resulting from mergers and acquisitions to operate more efficiently worldwide
- Reduce operations and maintenance costs to better compete in the highly-competitive life sciences industry

Solution

- Consolidated five separate clinical data management systems by standardizing on Oracle Clinical, a recognized and trusted application in the life sciences industry, which led to improved efficiency and increased client confidence
- Integrated Oracle Remote Data Capture into a suite of clinical trial management applications accelerating entry and management of clinical trial data and providing an in-house electronic data capture tool for its pharmaceutical, biotechnology and medical device clients
- Supported ongoing efforts to further reduce maintenance and operations costs by consolidating on one version of Oracle Database and extending clinical system standardization worldwide
- Leveraged Oracle Discoverer and Oracle Application Server to streamline report creation for both internal and external reports providing clients with direct access to reporting tools via a secure portal, reducing time to access vital clinical trial data
