“The Oracle Business Intelligence solution helps us to analyze critical funding data. It provides us with a better understanding of healthcare needs, so we can prioritize our resource allocations and ensure citizens receive the best possible care.” – Sun Wen Ge, IT Manager, Shenyang Healthcare Funding Management Center

Shenyang Healthcare Funding Management Center Ensures Accurate Distribution of Healthcare Funds

The Shenyang Healthcare Funding Management Center is a state-owned organization that provides healthcare insurance to citizens in the city of Shenyang. In April 2009, the Chinese Government announced its intention to reform healthcare, and ensure equitable access to essential services for millions of Chinese. Over the first three years of the plan, more than 60% of healthcare costs will be borne by provincial and local governments.

Challenges

- Install a faster, more powerful healthcare funding management system that gives real-time access to user-friendly data reports
- Implement a solution that supports informed decision-making around the provision of insurance, as the organization’s existing data management system did not offer this capability
- Ensure the organization can implement and support the Chinese government’s healthcare reforms

Solution

- Engaged Oracle Certified Advantage Partner Neusoft to build a business intelligence system using Oracle Business Intelligence Suite Enterprise Edition, the first adoption of the solution in the Chinese healthcare insurance sector
- Increased efficiency by streamlining the decision-making process, ensuring funds are allocated in a timely manner
- Provided the management team with real-time access to accurate reports on healthcare funding requirements, current disbursements, and related matters, enabling them to make decisions quickly and confidently
- Established effective monitoring measures that enabled the management team to track disbursements and control spending
- Gained data analysis capabilities that helped senior managers to better understanding the impact of healthcare funding policies
- Ensured rapid system adoption with a user-friendly interface
