“We chose Oracle BIEE because the software would integrate seamlessly with our Oracle E-Business Suite system. We were very pleased with the way AdvancedTEK handled the project. The team ensured the system met our requirements and were always available to help when we had questions.”

– Steven Huang, Project Manager,
General Management Division,
SOLOMON Group

SOLOMON Group Gains Business Intelligence Capabilities with Help from AdvancedTEK International

Formed in 1973, Taiwan-based SOLOMON Group manufactures and sells electronic components such as battery units, integrated circuits (IC), reader cards, and wireless communication switching devices. From 2008, SOLOMON Group will focus on LCD-related component products, power IC, and medical instruments. The SOLOMON Group believes in creating value as its corporate objective, and endeavors to create value for customers, employees, and shareholders.

Challenges

- Establish processes and systems to organize and integrate business information from multiple sources
- Generate monthly reports automatically, rather than relying on manual input using Microsoft Excel spreadsheets
- Enable searches to be conducted across multiple dimensions
- Streamline report production
- Strengthen communication between departments

Solution

- Engaged Oracle Certified Advantage Partner AdvancedTEK International to design, develop, test, and implement an analysis and reporting system based on Oracle Business Intelligence Enterprise Edition (BIEE)
- Leveraged Oracle Discovery tables as the source of data for the analysis and reporting system
- Ensured the system met business requirements by inviting end users to trial the system during testing
- Provided post-deployment support to help SOLOMON quickly resolve any system problems
- Gained the ability to convert transactional data into intelligence that supports informed decision making
- Enabled each department to efficiently produce accurate monthly reports
- Achieved multi-dimensional search and querying through proper organization and integration of data
- Gave senior managers real-time access to accurate information
- Improved collaboration and information sharing across the enterprise
