“The JD Edwards platform is the centerpiece of our IT strategy. With the assistance of Sunway Business Applications, we now have a more powerful ERP system that will help strengthen financial and project management.” – Cheah Kok Hoong, General Manager – IT, Shared Services Centre

Sunway Construction Improves Financial and Project Management with Integrated Platform

Sunway Construction is one of the largest construction and engineering companies in Malaysia. The company provides design and building services, civil, mechanical, and electrical engineering, and infrastructure development. It also rents heavy construction equipment, scaffolding, and other machinery. In addition to construction projects in Malaysia, Sunway is involved in construction programs in India, the Middle East, and the Caribbean Islands.

Challenges

- Upgrade to the latest version of JD Edwards EnterpriseOne
- Ensure the migration is completed without any impact on the business
- Provide online access to consolidated project information
- Create a construction solution template for rollout to remote sites

Solution

- Achieved a quick, trouble-free rollout by engaging Oracle Certified Partner Sunway Business Applications to complete the implementation
- Minimized customization as the JD Edwards software offered greater functionality
- Prevented disruption to the business by running the old and new systems in parallel until the new platform was bedded down
- Ensured speedy implementation by using readily available construction and financial solution model
- Gained fully integrated system with single data entry point based on best-practice solution
- Supported informed decision-making with online, automated, timely, and reliable information
- Improved business understanding with flexible reporting tool
- Protected data with flexible security model
- Prepared for future growth with flexible, expandable system
