“We adopted JD Edwards applications and Oracle’s software infrastructure because they are reliable, flexible, and robust. This allowed us to have a system capable of operating 24/7.” – Marcelo Matchulian, IT Manager, Terminales Río de la Plata S.A.

Terminales Río de la Plata Improves Operational Efficiency and Agility with Reliable IT Infrastructure

Terminales Río de la Plata operates one of the most important terminals in the Port of Buenos Aires. Its services include loading and unloading of ships, receiving large transatlantic passenger ships, and providing container storage.

Challenges

- Support business operations and future expansion with an IT infrastructure that can provide around-the-clock availability
- Improve financial management through expanded visibility of critical information

Solution

- Consolidated different systems with Oracle Database to reduce IT complexity and improve the availability of critical business data
- Optimized administrative processes such as billing and accounting with JD Edwards EnterpriseOne, significantly reducing operational costs
- Expedited the financial processes for accounts receivables and accounts payables with JD Edwards EnterpriseOne Financial Management, allowing an easier and better adaptation to the changes in the company’s income
- Expanded visibility of critical financial information, driving more informed and agile decisions
