“Thanks to the flexibility of Oracle E-Business Suite, we deploy 12 to 15 subsidiaries a month in France, and support VINCI Energies’ European development.” – Sébastien Gourdon, Oracle deployment manager, VINCI Energies

VINCI Energies Centralizes Platform for 355 Subsidiaries Worldwide

Company of the VINCI group with expertise in energy and information technologies, VINCI Energies designs, produces, and maintains solutions for industry, services, and local government. Leader in its various markets in France, VINCI Energies is also one of the leaders on the European stage, operating in 18 European countries and generating approximately 30% of its net sales outside France.

Challenges

- Install a system that supports the group’s strong growth
- Achieve greater transparency to comply with the Financial Security Act and IFRS (International Financial Reporting Standards) accounting standards for publicly traded companies
- Meet the specific local and legal requirements of its 355 subsidiaries for financial reporting and purchasing
- Reduce the information system’s maintenance costs and facilitate its deployment

Solution

- Implemented Oracle as the common technology platform for all of VINCI Energies’ subsidiaries, simplifying processes and lowering costs
- Unified purchasing and financial management with Oracle Procurement and Oracle Financials while allowing for substantial regional control and flexibility
- Using Oracle Procurement to provide a top-down view of purchases and improve negotiations with suppliers, helping contain costs
- Improved support for the group’s strong external and international operations by eliminating hard-to-coordinate systems and applications
- Improved and sped communication of business-specific and economic information within the group by setting up an intranet using Oracle Portal
