Schedule and prices are subject to change								
<p><b>Don't miss April 27 &amp; 28 2010 @ Athens : Jonathan Lewis, 2 day seminar.</b></p> <p>The first day of the seminar has two targets. First: how do you improve the performance of a production system by attacking inefficient SQL; secondly: how do you design a system so that you can get data into and out of it efficiently. The course will focus on the SQL - falling back to structural issues as an aid to improving the mechanical efficiency of the SQL solution - and will spend some time explaining the pros and cons of various structural options as they become relevant to the SQL. Also the course will cover methods of reviewing data distribution patterns, use of indexes, use of views (stored and inline), analytic functions, subquery factoring, as well as statistics, hints, and a brief review of execution plans.</p> <p>Second day of the seminar about Trouble-shooting or Tuning - What's the difference? What are the strategies. Why tuning is hard but trouble-shooting is easy. Key targets, indicators and mechanism for producing a well-tuned system on day one. Strategies for dealing with badly performing systems after go-live. Frequently Occuring Problems - Some of the most commonly occurring issues that affect performance after a system has gone into production. Methods for spotting them, measuring the impact and dealing with the cost/risk/benefit triangle involved in fixing them. Getting into the habit of pre-emptive analysis and pro-active fixing. Quick Fixes - Methods, workaround and dirty tricks for dealing with classic performance problems when the system is in production. There really aren't quick fixes that can be applied across the board - each one needs careful examination of costs, risk and benefits. In this session we consider some of the options that are most likely to be worthwhile.</p>								
Oracle Database 11g				2010				
Code	Course Title	Duration (Days)	Νοέμ.-Δεκ.	Ιανουάριος	Φεβρουάριος	Μάρτιος	Απρίλιος	Μάιος
