

Oracle Expert Health Check

Oracle Security Healthcheck & Audit

Features

- Comprehensive security analysis and report
- Security assessment conducted by Oracle experts
- Proven Oracle best practice techniques

Are you are using an Oracle Database and have high security requirements, but are not sure whether existing measures meet your requirements? Do you lack the resources to be able to conduct a thorough security assessment?

If so, our Oracle Security Healthcheck and Audit is for you. Our experts can analyze your existing Oracle Database and adjust the parameters to achieve the levels of security that match your organization's requirements. Our security healthcheck draws on all of the current recommended best practices and supports the optimal, secure use of your Oracle Database.

Overview

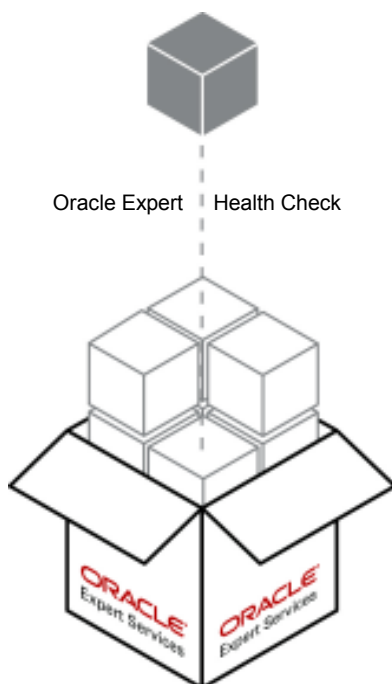

The Oracle Database offers many configuration options. Security options can be chosen alongside other options for speed and space utilization, and data can also be comprehensively protected through the definition of roles and the use of Virtual Private Database (VPD) functionality. Not only can the data in the database be secured using the relevant measures, but that data should also be protected during any transfers, especially if it is subject to privacy legislation.

Scope of the Offering

The Oracle Security Healthcheck and Audit is conducted in two phases:

A **review phase** comprising a meeting with the systems administrator, the DBA and the security representative, followed by the security analysis. The analysis is conducted according to a defined checklist, which includes the following elements:

- Oracle RDBMS versions 7 – 10g
- Operating system
- Oracle Software
- SQL*Net configuration
- Database passwords
- Auditing
- Roles and role allocations, system and object privileges
- Views, stored procedures etc.
- Test of a typical client computer

A **report phase**, which comprises the analysis of the information collected during the review, and the production of a report with a detailed enumeration of all the weak spots found during the analysis, together with recommendations for correcting them.

Requirements

The Oracle Security Healthcheck and Audit offer applies to up to two Oracle Databases running on Sun Solaris, AIX, HP-UX, MS-Windows or Linux. Testing of the operating system only extends as far as assuring the secure installation and operation of the Oracle components under review. If your systems are complex, don't hesitate to discuss your requirements with us. We can create a tailored proposal to match your needs.

This service does not include the cost of any software licenses that may be required.

Deliverables

Security Audit report which contains:

- analysis of the reviewed system
- details about founded security vulnerabilities
- action plan for their resolution

Price

Oracle Security Healthcheck & Audit service is offered for a fixed price of 6.300,-EUR and will be implemented in a period of 8 man/days. You will receive a final security review report within 5 working days since initial visit. The prices listed are without VAT.
