WORLD'S LARGEST ENTERPRISE SOFTWARE COMPANY HONOURS "ENTERPRISE 2.0" START-UP Incoming Wave of Enterprise Software Recognised by Industry Giant

LONDON, UK, 8 February 2007 - Trampoline Systems, a London-based software start-up, today announced that it has received Oracle's 2006 UK Partner Innovation Award. Charles Armstrong, CEO of Trampoline Systems, accepted the award on behalf of the company at the Oracle UK Partner Awards 2006 in a ceremony held in London's Canary Wharf.

The award acknowledges Trampoline's pioneering position in the enterprise software sphere and its fruitful partnership with Oracle. Trampoline's technology takes a radically different approach to enterprise infrastructure, harnessing social behaviour within the enterprise to leverage latent expertise and relationships.

Charles Armstrong, Trampoline Systems' CEO, commented, "This award means a lot to us. Oracle is the acknowledged leader in enterprise software so for them to recognise Trampoline's innovation like this is the best affirmation we could ask for. Our vision is about making Trampoline intelligence easy to add to industry-standard platforms such as Oracle's so our customers get the best of both worlds. That's a terrific basis for a partnership."

Trampoline core product is the SONAR appliance, which plugs into the corporate network and connects to existing systems including email servers, contact databases and document stores. It analyses this data to map social networks, information flows, expertise and individuals' interests throughout the enterprise. Designed to increase the value of an enterprise's relationships, to make expertise visible and to bring information to where it is needed, the system is easy-to-use and quickly deployed.

"We are delighted to recognise the pioneering technology of Trampoline, because it underlines how innovative UK companies are developing products that can compete on the global stage," said Alan Hartwell, Vice President Technology Solutions and Partners. "Web 2.0 changes the rules of business and you can either treat that as a threat or a business opportunity. It was clear from early on in our work with Trampoline that it saw this as an opportunity, because it was changing the way employees within large enterprises understood their businesses and collaborated."

About Trampoline Systems

Trampoline Systems is an enterprise software developer based in London, UK. Trampoline's products harness social behaviour throughout the organisation to pinpoint expertise, leverage relationships and relay knowledge where it's needed. Its client list includes Raytheon Company, the UK Foreign Office, Grant Thornton and Channel 4 Television. The company is backed by investors in the UK, Japan and the USA and the UK Government recognised Trampoline's pioneering technology with a Research Award in 2004.
