

JD EDWARDS ENTERPRISEONE AGREEMENT MANAGEMENT

KEY FEATURES

- Streamline ongoing management of partnership agreements
- Ensure compliance with contract terms
- Increase accuracy of settlements
- Complete information on a variety of agreements
- Agreement association with each transaction

As your supply chain evolves in complexity, you want to leverage current and new partnerships. Your partners are diverse in terms of geography, products, services and size. With this diversity comes agreement management complexity. JD Edwards EnterpriseOne Agreement Management gives you enterprise capabilities to manage partner relationships for your entire supply chain, regardless of partner size.

The Issue: Efficiently Manage Transactions for Multiple, Diverse Partnerships

Companies are looking to partner with others to eliminate redundancies throughout the supply chain. For faster response in demand-driven market environments, they are leveraging core competencies and sharing expertise and physical assets. These partnerships increase productivity, improve customer service, and reduce capital expenses. But there is a downside. Managing agreement terms and transactions for many different partnering arrangements does create multiple challenges to management of your supply chain.

The Solution: Detailed and Accessible Information

Set up, change, and manage your partner agreements with Oracle's JD Edwards EnterpriseOne Agreement Management. Contract compliance is easily tracked because sales and purchase order transactions are associated with the appropriate agreements and agreement status is continually monitored. You get real time details, including:

- Complete information on a variety of agreements, from simple purchase and supply contracts to more complex exchange and throughput agreements, and storage deals.
- Agreement association with each transaction — sale, purchase, transfer, or inventory movement for automatic running balances.
- Fast access to agreements through a wide range of search criteria, such as branch/plant (depot), agreement name or description, type, status, effective date, product number, and partner agreement number.

Agreement Management enhances partner relationships by handling compliance in an efficient, organized manner. With online statements, you quickly monitor variances between contracted quantity and total transaction quantity. You generate statements to confirm outstanding balances and settle discrepancies by creating a product quantity or financial settlement transaction. And you adjust agreement amounts and values in the system at any time, based on negotiations with partners.

For business success, you must manage agreements effectively. When all parties know where they stand, your trading relationships can be mutually beneficial and profitable.

Feature/Function Highlights

- Agreement association with each recorded transaction
- Multiple products on a single agreement
- Balance statement for partners
- Minimum and maximum contract quantities
- Buying structures
- Sales line override with contract price
- Cost override on purchase orders with contract amount
