

PEOPLESOFT SERVICES PROCUREMENT

Oracle’s PeopleSoft Enterprise Services Procurement enables complete control and oversight of services spending. It is a key component of Oracle’s PeopleSoft Enterprise Supplier Relationship Management solution, the integrated suite that dramatically cuts all supply management costs.

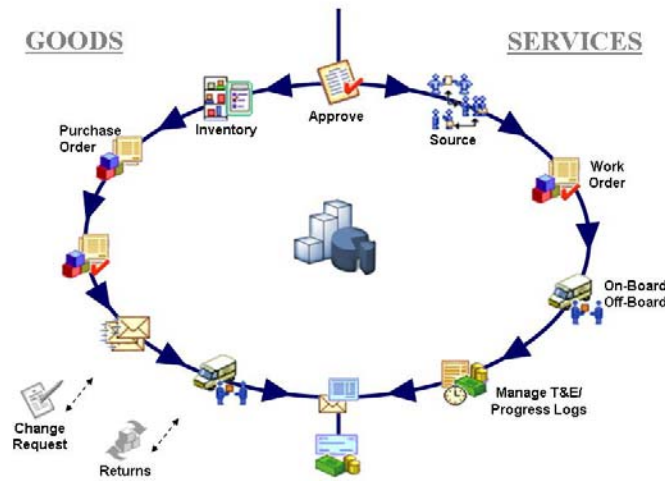

Increase visibility and control of all services.

Enhance supplier relationships.

Reduce costs.

Reduce Cost and Improve Performance

Efficient and cost-effective procurement of services is imperative in today's business economy. While many process improvements have been made for the procurement of goods, services processes have remained largely manual, resulting in unmanaged costs, extended cycle times, and unwanted error. Services are typically more complex, resulting in business processes that require unique functionality to effectively manage them. PeopleSoft Services Procurement is the only enterprise-class application that manages the entire services procurement process from request through settlement, enabling companies to lower services costs, collaborate with suppliers to rapidly fill service needs, and ensure the quality of services delivered.

To control and reduce services spend, corporations must have a solution that helps them manage the entire services procurement process. Services spend is complex and requires unique functionality and flexible business processes to manage. PeopleSoft Services Procurement is the only enterprise-class application that manages the entire services procurement process from request through settlement.

You are able to take your labor-intensive, paper-based processes and move them online to track and manage procurement activities within an organization easily.

Control Costs

Combining increased visibility with process efficiency and powerful analytical tools, PeopleSoft Services Procurement enables companies to better control their spending on services. You now have the ability to better understand what services you are buying and from whom you are buying. You also can drive more of your spending to preferred suppliers to leverage negotiated rates and relationships, gaining better management and even a reduction in the overall cost of contract services.

Services Fulfillment. You can source, fill, and monitor the services procurement process. Users can enter requisitions and strategically source the requisitions to preferred suppliers. Your organization can establish complex business rules to capture requisitions and manage the sourcing process. Once you select a services provider through the sourcing process, a work order is automatically created, documenting the terms and conditions of the project. PeopleSoft Services Procurement enables you to:

- Enter, route, and approve requisitions for resource and deliverable-based services.
- Create a tiered network of preferred suppliers, including competencies and pricing agreements.
- Route requirements to preferred suppliers and monitor all submittal data and communications with suppliers automatically.
- Configure vendor selection by location, category, status, and requested role type.
- Generate a work order that documents terms and conditions of the project automatically.
- Notify suppliers about new requirements, managers about awaiting approvals, project or work order completion, and more through alerts.
- Manage candidates.
- Use supplier enablement tools to collaborate with service suppliers.

Easily Source Services

Easily source services with multiple bid factors.

Services Management. Organizations can track and manage the delivery of services. You can define projects and activities for time and expense capture and payment. Time and expense capture functionality tracks the delivery of a service and approval of time, and supports complex business rules. The time capture function also can track service provider expenses. PeopleSoft Services Procurement enables:

- Functionality for service providers to log time against multiple projects.
- Service providers to report time based on shifts, assignments, or both.
- Online time and expense submission.
- Workflow routing for approvals, including functionality for automatically rerouting to an administrator when no approver is found.
- Timesheet approvers to override time categories during the approval process.
- Requisition, response, and timesheet approval workflow and email notification.
- Multiple time-based work order alerts triggering events such as a mandatory performance review after a certain period of time
- Facility and security notifications for tracking and coordinating security badges, system logins, workstations, and more.
- Change order capabilities for buyers and vendors to manage and track changes in agreement elements, such as scope of work, deliverables, budget, and more.
- Project-based tracking for fixed-fee and time-and-materials agreements.
- Service delivery tracking including multiple time reporting tools with project code and cost center fields, delivery notices, and credit and expense reporting.

- Vendor Managed Services (VMS) when you need a third-party staffing company to manage contingent labor sourcing and operations.
- Expanded roles for contingent labor allowing you to define multiple roles for a single user, that is, as both a Service Provider and a Service Coordinator.

Complete Services Settlement

Tightly manage deliverable-based services by tying invoice payment to the completion of milestones or deliverables.

Services Settlement. Users can manage invoicing and settlement processes for the procurement of services. You gain the ability to approve payment and create an electronic three-way match, avoiding the time, cost, and errors associated with paper-based processes. Supplier and self-invoicing are available, as well as the ability to facilitate the management of services and ensure proper accounting for all service activities. You can:

- Maintain complete invoice administration.
- Consolidate invoices by customer or consolidation rules, such as purchase order by contractor, by hiring manager, and so forth.
- Pay assignments on a time or per incident basis.
- Configure and approve invoices.
- Print and submit invoices.
- Print invoice reports.
- Conduct self-invoicing.
- Manage supplier invoicing and invoice approval routing.
- Use automatic three-way matching between purchase order, agreement, and approved service delivery.

- Export invoices to an external accounts payable system.
- Export approved invoices to select ERP payables systems for payment using the PeopleSoft Services Procurement integration framework.
- Use Visibility of Services Procurement invoice information from Accounts Payable voucher.

Analytics. PeopleSoft Services Procurement delivers a comprehensive analytical tools standard with the application to enable users to drill down to key performance metrics and better manage spending on services. Drill down to:

- Enterprise-wide historical usage reporting.
- Spend reporting by job type, supplier, project, and more.
- Current and historical headcount reports.
- Supplier performance metrics (response time, quality of service, number of responses by supplier, rates, and so forth).
- Individual performance metrics.
- Requisition process tracking (open requisitions, submittals, fill ratios).
- Decision support tools to analyze the effectiveness of the fulfillment process.
- Ad hoc reporting capabilities.

Integration. While PeopleSoft Services Procurement can run independently, it does leverage your investment through integration with other PeopleSoft Enterprise applications, as well as third-party applications. Integrating it with:

- Oracle's PeopleSoft Enterprise eProcurement enables organizations to manage the procurement of all goods and services—sharing workflows, vendors, and other common business processes.
- Oracle's PeopleSoft Enterprise Payables seamlessly integrates the supplier settlement process to perform matching validation between receipts, purchase orders, and invoices.
- Oracle's PeopleSoft Enterprise Projects shares project and activity data for full project accounting.
- Oracle's PeopleSoft Enterprise Expense defines expense policies for both employees and service providers.
- Oracle's PeopleSoft Enterprise Services Automation provides an end-to-end solution for managing services spend and for maximizing the value obtained from those services.
- Oracle's PeopleSoft Enterprise HRMS provides total management of all human capital resources and leverages pre-established organizational hierarchies and competencies.
- Other PeopleSoft Enterprise applications enables our customers to leverage their existing configurations and table data, and leverages selected business unit and organizational data.

Supports Full Internationalization

Manage all global service needs.

Third-Party Applications

By supporting cXML, PeopleSoft Services Procurement provides easy integration into third-party eProcurement applications. Application interfaces enable Services Procurement to optionally integrate to third-party payables, project, and time entry applications.

Globalization

To meet the demands of the global market, PeopleSoft Services Procurement supports full internationalization with multilingual and multicurrency capabilities. It also supports multiple tax methods, including value added tax (VAT), goods and service tax (GST), and other sales and use tax requirements. PeopleSoft Services Procurement also provides multicurrency processing. This means companies can process a requisition in their own currency while seamlessly transacting with the supplier in another currency.

PeopleSoft Services Procurement offers the same benefits as other PeopleSoft Enterprise applications. You can:

- Customize to suit your specific business requirements.
- Create comprehensive security by roles and business unit.
- Configure rules-based workflow.
