

March 28, 2005

Dear Partner:

Earlier today, Oracle announced that it had completed the acquisition of Oblix, Inc., a leading developer of identity-based security for heterogeneous environments, to further strengthen our enterprise infrastructure software solutions. We would like to take this opportunity to welcome Oblix partners and to outline the benefits we expect to deliver as a result of this acquisition.

With this merger, Oracle plans to offer customers a complete solution for Enterprise Identity Management, including solutions to securely manage identities and authorization privileges, provision and manage users, federate identity to do business securely with business partners, and lower the cost of regulatory compliance. Oblix's technology leadership in enterprise identity management solutions and policy-based web service management complements Oracle's enterprise infrastructure software.

For partners, the combination of Oracle and Oblix will provide the market with a complete identity management suite that addresses core customer business needs, such as regulatory compliance, secure user access, and cost effective employee lifecycle management. We are committed to ensuring the highest level of support for your customers' software investments, continuity of service, accelerated innovation, and ultimately, the implementation of solutions that are less complex and easier to maintain. In addition, the acquisition opens doors to incremental growth opportunities through additional tools and services. With the complementary talents of our partner bases and breadth of our combined products, we will become more effective and competitive in the delivery of provisioning solutions to satisfy customer requirements.

Oracle also intends to scale the merged Oracle and Oblix security business rapidly. The Oblix products, including COREid, SHAREid, and COREsv, will continue to be available on a stand-alone basis. Oracle will also include the best features and capabilities of Oblix into its broader identity infrastructure offering. We are moving forward aggressively to integrate the Oblix product offering with our database, application server suite, and business applications to ensure that our customers can exploit the benefits of identity management and web services management with other

Oracle products. On a combined basis, the acquisition of Oblix enables Oracle to accelerate its position as a leading identity management software vendor.

During the upcoming months, our goal is to provide you with the knowledge, tools, strategies, and support essential to drive your continued success. Together, we will focus on taking our relationships, solutions, and services to the next level, which will ensure customers are satisfied and confident in our ability to meet their needs.

We encourage you to continue to use your existing contacts for support, professional services, and sales to address any ongoing needs you or your customers may have.

We are excited about this combination and how it will change the future of security software. Please join us for an online Town Hall meeting on Tuesday, April 5 at 9:00am (PST) when we will further outline our plans for the combined offering and address any questions you may have. More information about the Town Hall and other information can be found at our Website oracle.com/oblix.

We appreciate your continued support.

Sincerely,

A handwritten signature in black ink that reads "Bronwyn Hastings". The signature is stylized with a large, looped initial "B" and a long horizontal flourish at the end.

Bronwyn Hastings
