Oracle Beehive is the only complete, open, integrated platform for enterprise collaboration. Users can connect to relevant people and information in order to effectively coordinate activities. Oracle Beehive's mobility options allow users to access their email through their method of choice, keep track of their calendars and task lists and have full access to their personal contacts when placing phone calls, composing emails, arranging meetings, or assigning tasks.

Mobility Standards Support and Strong Partnerships

Oracle Beehive's out of the box support for open standards and device management can support a diverse set of devices and make it easy for user to configure their devices and to install 3rd party mobile software.

Oracle Beehive Mobile Client provides Windows Mobile Professional and Windows Mobile Smartphone users with wireless access to Oracle Beehive e-mail, and enables users to synchronize calendar, tasks, and contacts.

For device platforms that do not support standards natively, we have a partner with Synthesis AG to provide a synchronization client for Apple iPhone and Palm; and SHAPE Services whose IM+ XMPP Instant Messaging client is supported on almost all major mobile platforms.

For those looking for a more tightly controlled mobility environment, we have partnered with Notify Technology. The NotifyLink Enterprise Edition for Oracle Beehive communicates directly with the Oracle Beehive server, with all organizational data stored behind the firewall. Data is transmitted directly to wireless devices fully encrypted.

Oracle Beehive can also be configured to automatically send users mobile SMS alerts through our partners Clickatell and Verisign.

Popular Device Support

The key technology alliances allow Oracle Beehive to provide support for the most popular mobile devices and smart phones. These include the Apple iPhone, RIM Blackberries, Windows Mobile devices and a variety of other devices from major manufacturers such as Sony, Motorola, Samsung and Palm.

*Device support may require 3rd party technology from Oracle Business Partners
