

ORACLE BUSINESS PROCESS MANAGEMENT SUITE

KEY FEATURES

ORACLE BUSINESS PROCESS MANAGEMENT FEATURES

- User-friendly Business Process Modeling Notation modeling
- Simulation and optimization
- User interaction and collaboration for end users
- Microsoft Office integration
- Roles and groups
- Organization model
- Forms creation
- Calendar

ORACLE BPEL PROCESS MANAGER FEATURES

- Business Process Execution Language support and debugging
- Built-in integration services
- Packaged application adapters
- Performance tuning
- Transformation services
- Synchronous and asynchronous messaging

ORACLE BUSINESS ACTIVITY MONITORING FEATURES

- Rich user interaction
- Role-based access
- Real-time lists, charts, key performance indicators
- Configurable alerts
- Patented technology
- Highly scalable
- Event-driven architecture

ORACLE BUSINESS RULES FEATURES

- Tools for developers and business analysts
- High-performance, small footprint engine
- Rules software development kit for heavy customization

Business processes define the way we work. Oracle Business Process Management Suite drives more efficiency, visibility, and agility from a broader range of processes than any other product. Gathering the leading tools required for business process management (BPM), Oracle Business Process Management Suite is a comprehensive and integrated suite of products. Whether the process is a line-of-business (LOB) mandate or an IT exercise in systems integration, Oracle Business Process Management Suite offers the flexibility that the business demands as well as the power that IT requires.

The Business Process Management Challenge

Market-leading companies achieve sustainable competitive advantage by delighting their customers, achieving operational excellence, and innovating products.

Companies depend on the effective execution of their business processes to meet these goals. Whether for product development, customer service, or the supply chain, most processes are created and structured by vertical organizations that perform discrete functions, such as human resources, finance, sales, and marketing. IT supports the applications and systems for these organizational functions, including customer relationship management, sales force automation, human capital management, and supply chain management.

However, business processes span across all these functions, applications, and systems. As you service your customers, manufacture products, and administer the business, you engage people and systems across the enterprise to complete complex processes. Too often, processes are completed inefficiently and at high cost. And that means you run the risk of falling behind your competition.

How do leading organizations create business processes that increase margins, improve customer satisfaction, provide visibility into market risk, and improve operational excellence? They accomplish this by adopting BPM technologies to optimize business processes.

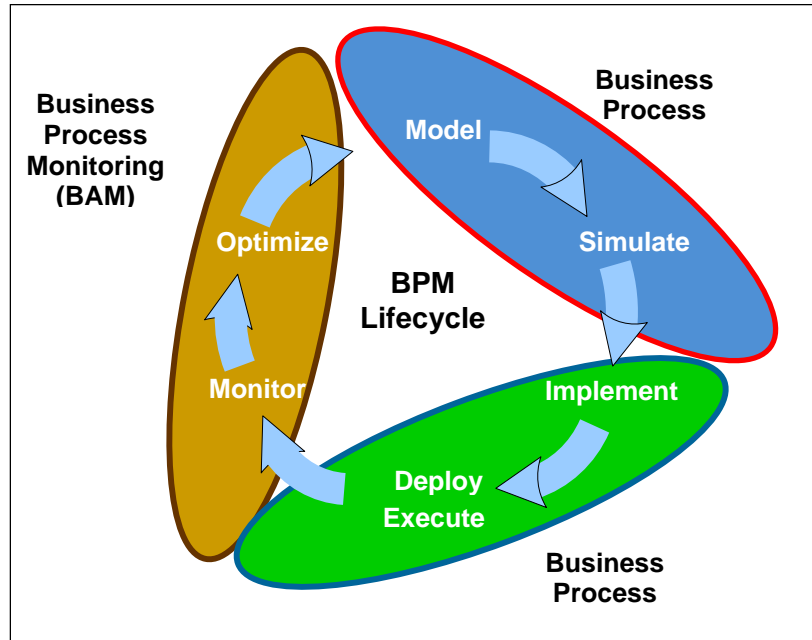

Oracle Business Process Management Suite Overview

Oracle Business Process Management Suite is a complete product suite for modeling, automating, managing, simulating, optimizing, and executing business processes across organizational divisions, systems, and applications. The suite improves process efficiency and quality by raising utilization and throughput. It increases visibility into process performance and simplifies compliance by providing transparent data. Ultimately, it increases corporate agility with flexible tools.

ORACLE WEBCENTER SUITE FEATURES

- Context-rich portals and composite applications
- Content and knowledge repository
- Team collaboration
- Enterprise search
- Process portlets for managing tasks

Oracle Business Process Management Suite offers a comprehensive and integrated set of tools for both LOB users and IT developers supporting human- and system-centric processes. The suite is composed of Oracle Business Process Management, Oracle BPEL Process Manager, Oracle Business Activity Monitoring, Oracle Business Rules, and Oracle WebCenter Suite.

Oracle Business Process Management Suite provides support for all members of the BPM lifecycle and enables agile process deployment dynamics.

Oracle Business Process Management

Ideal for LOB users, Oracle Business Process Management allows business analysts to model, simulate, and optimize human-centric business processes in collaboration with IT. Oracle Business Process Management also provides the interfaces for users to interact with processes.

Oracle BPEL Process Manager

Oracle BPEL Process Manager is a standards-based tool for building and orchestrating processes and Web services for system-to-system integration. IT departments can deploy mission-critical, high-volume processes while leveraging existing infrastructure services.

Oracle Business Activity Monitoring

Oracle Business Activity Monitoring is a complete solution for building interactive, real-time dashboards and proactive alerts for monitoring business processes and services. Business users and operations managers have the information they need to make decisions quickly.

Oracle Business Rules

Oracle Business Rules makes processes and applications more flexible by enabling business analysts and nondevelopers to easily define and modify business logic without programming.

KEY BENEFITS AND RELATED PRODUCTS**BENEFITS**

- Delivers immediate and impactful return on investment
- Gives visibility and control to the business
- Speeds delivery of new solutions and innovations
- Helps IT and LOB managers speak a common language
- Eliminates the boundaries among applications, systems, and people
- Improves process throughput and productivity
- Automates processes to reduce overhead and costs

RELATED PRODUCTS

- Oracle SOA Suite
- Oracle SOA Governance
- Oracle Complex Event Processing

Oracle WebCenter Suite

Oracle WebCenter Suite provides a portal interface to simplify users' interaction with business processes. In addition, it supplies the collaborative aspects of human-centric processes such as knowledge and document management, threaded discussions, and shared calendars.

Unmatched Completeness

Unique among BPM products in the marketplace, Oracle Business Process Management Suite is a complete solution. Whether the process is human- or system-centric, business- or IT-driven, high-volume or high-capacity, collaborative or structured, single- or cross-platform, service-oriented architecture-enabled or standalone, portal-deployed or not, Oracle Business Process Management Suite provides all the tools required in an integrated, industry-leading package that is backed by the most BPM deployment experience available.
