

BUSINESSOBJECTS FOR PEOPLESOFT ENTERPRISE PERFORMANCE MANAGEMENT

PeopleSoft Enterprise 8 certified software integration. Advanced solution for business intelligence. Extends benefits of PeopleSoft Enterprise Performance Management.

INTEGRATED WITH

PEOPLESOFT ENTERPRISE

Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards based vanilla product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

Business Objects

Business Objects is a leading provider of business intelligence (BI) solutions. Business intelligence lets organizations access, analyze, and share information internally with employees and externally with customers, suppliers, and partners. Business intelligence helps organizations improve operational efficiency, build profitable customer relationships, and develop differentiated product offerings.

The company's products include BusinessObjects™, an integrated business intelligence toolset and platform, and BusinessObjects Analytics, an integrated suite of enterprise analytic applications. In 1990, Business Objects developed a patented "semantic layer" that insulates users from the complexity of databases. In 1995, the company turned its focus to enterprise-scale BI deployments, and currently serves large-scale customers with more than 20,000 users. In 1997, the company moved to the internet and expanded into the market for BI extranets. In 2000, the company delivered an interactive wireless BI solution. Today, Business Objects continues to create and deliver an innovative vision for enterprise analytic applications.

Integration Overview

This integration utilizes a SQL-based security bridge to automatically synchronize row-level user security in Oracle's PeopleSoft Enterprise Performance Management with the BusinessObjects Supervisor repository. As a result, no joins need to be manually added to BusinessObjects universes or in Supervisor in order to handle security. Changes in EPM row-level security criteria are automatically reflected in BusinessObjects. Metric object (column) security is handled from within BusinessObjects.

BusinessObjects with the security bridge to PeopleSoft Enterprise Performance Management allows:

- Direct access to EPM datamarts.
- A simple, intuitive front end for users to access PeopleSoft Enterprise Performance Management.
- Synchronization of PeopleSoft Enterprise Operator Ids with BusinessObjects.

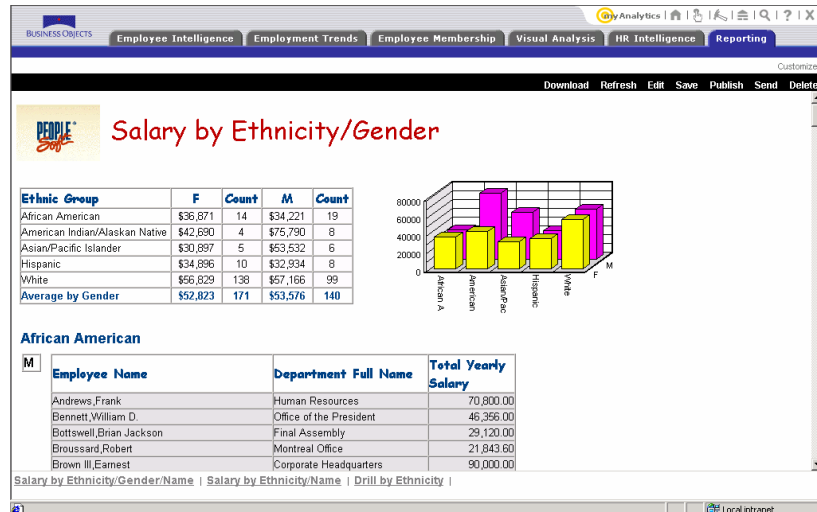

BusinessObjects for PeopleSoft Enterprise

With PeopleSoft Enterprise Performance Management version 8.3, BusinessObjects has a direct link to the relational data store. This link with EPM datamarts is accomplished with standard BusinessObjects universe functionalities, and is thereby presented to the end user with a clear business representation via the semantic layer.

This shields the user from the complexities of the database structure and SQL, and also offers the ability to implement security in terms of the data and values that can be accessed.

Ad Hoc Queries and Reports

PeopleSoft Enterprise customers can create advanced ad hoc queries and analyze reports from the PeopleSoft Enterprise Performance Management applications, and use this information in intranet, extranet, portal, and mobile environments.

Availability

BusinessObjects for PeopleSoft Enterprise Performance Management is available from Business Objects. For more information call 408 953 6000.

Support

BusinessObjects for PeopleSoft Enterprise Performance Management is supported by Business Objects.

Validation Environment

Hardware: Intel

Software: PeopleSoft Enterprise Performance Management 8.3, PeopleTools 8.18, BusinessObjects version 5.1

Database Platform: Oracle 8.1

Operating System: Windows 2000
