Human resources software manages employee and company information.

Company Overview

En-Sof offers advice, training, and a suite of Oracle-based software solutions, called En-Sof RH, for human resources processes.

Integration Overview

The En-Sof RH integration with Oracle E-Business Suite sends data between the systems using a SOA-based integration method. En-Sof RH integrates with Oracle's human resources, accounts payable, and general ledger modules. The following are some of the advantages of using a SOA-based integration:

- Faster communication between the systems
- Easier to develop and deploy
- Ease of use for the customer and client

Integration Details

The integration between En-Sof RH and Oracle E-Business Suite uses three BPEL processes, one inbound and two outbound.

The inbound process, ESHR, brings to En-Sof RH information about people, employees, documents, companies and more. The outbound processes are the ESAP and ESGL process. These processes send accounts payable information and other data to Oracle E-Business Suite applications.

The solution is extremely easy to use: the user simply clicks a command on the interface menu and the En-Sof RH software does all the work. The integration interface is shown in Figure 1.

INTEGRATED WITH

E-BUSINESS SUITE

Through the Oracle PartnerNetwork Application Integration Architecture for Partners Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.
