Delivering secure, easy, instant access to Web-based applications on demand

Integrating information and making employees more productive while reducing overall IT costs

Company Overview

Citrix is the global leader and most trusted name in application delivery infrastructure. More than 180,000 organizations around the world use the Citrix Access Platform to provide the best access experience to any application for any user. Citrix customers include all of the Fortune 100 companies and 98% of the Fortune Global 500, as well as hundreds of thousands of small businesses and individuals.

Integration Overview

Citrix Presentation Server is an end-to-end application delivery system that virtualizes and streams Windows-based applications for the lowest total cost and highest data security—to any user, with any device, over any network. Platinum Edition includes all the features of Enterprise Edition and adds critical capabilities for application performance monitoring, SSL VPN remote access with SmartAccess control and single sign-on application security.

Presentation Server can dramatically improve the performance of data intensive Web applications by publishing Web browsers on servers that are in the same data centers as required back-end data. In a centralized infrastructure, large data transfers could be contained completely within network storage, limiting WAN traversals to the virtualization layer with the Citrix ICA protocol.

Integration Details

Citrix Presentation Server is the industry-standard for application virtualization using a centralized and secure architecture. Presentation Server enables IT to centrally deploy and manage line of business applications while providing secure, on-demand access to these resources for users anywhere, on any device, and over any network. Running on Microsoft® Windows Server™ and UNIX® operating systems. Presentation Server supports virtually any custom or commercially packaged Windows®, UNIX, Java, and Web application, regardless of the infrastructure diversity.

Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

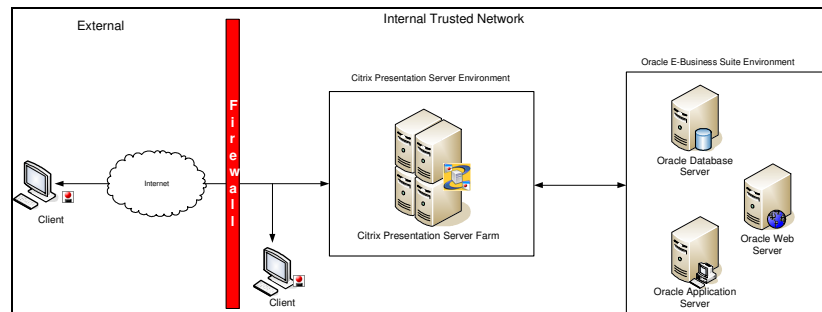

Availability

For more information on Citrix Presentation Server and the integration with Oracle E-Business Suite applications, please contact a Citrix representative at 800-393-1888 or visit the Citrix website at www.citrix.com/oracle.

Support

For information on our support offerings, please call your Citrix representative at 800-393-1888 or visit the Citrix website at www.citrix.com/support.

Citrix Presentation Server is used to deploy, upgrade, and manage applications from a centralized location. IT staff can install and configure Internet Explorer, Jinitiator, client certificates and auxiliary components centrally on Presentation Server and make the Oracle E-Business Suite immediately available to all users. Instead of managing these components on each client device, the Oracle E-Business Suite will be available to every client across the organization including outdated, legacy workstations. These capabilities are most beneficial when new user groups are brought live or a new application is rolled out to the organization. In addition to these management and deployment benefits, Citrix Presentation Server demonstrated user response time improvements over high latency links.

Environment

Citrix Environment

Citrix Presentation Server, version 4.5

Oracle E-Business Suite Environment

Oracle E-Business Suite Release 12.0

Oracle Database Server 10.2.0.2.0
