Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards-based product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

*Delivering optimized access to any device over any network
Optimizing WAN performance and reducing IT costs*

Company Overview

Citrix is the global leader and most trusted name in application delivery infrastructure. More than 180,000 organizations around the world use the Citrix Access Platform to provide the best access experience to any application for any user. Citrix customers include all of the Fortune 100 companies and 98% of the Fortune Global 500, as well as hundreds of thousands of small businesses and individuals.

Integration Overview

Citrix WANScaler solutions provide high-performance application delivery to branch office users. WANScalers accelerate application performance across wide area networks (WAN) by an average of 5x to 30x, and up to 300x at peak compression efficiency. With WANScalers in the network, end users in the branch office will experience LAN-like application performance over the WAN, which means less time waiting and more time using applications.

Citrix WANScaler accelerates applications to branch offices of all sizes, datacenters, and mobile workers. The AutoOptimizer Engine, which serves as the cornerstone of the WANScaler architecture, offers flexible deployment options: the WANScaler Client software (Available beginning with version 4.2) accelerates remote users in home offices and on the road, while users in larger branch offices are supported with WANScaler appliances.

Integration Details

Citrix WANScaler offers a completely transparent, end-to-end solution for all IP-based WANs (e.g. private leased lines, public Internet VPNs, satellite, and wireless WANs). Transparency eliminates the need for any changes to current network management tools, firewalls, network services, or applications. The solution supports hundreds of branch offices and WAN throughput up to 500 Mbps.

WANScaler solutions deliver increased WAN throughput and improved application response times for all applications. The system is built upon the AutoOptimizer Engine, which automatically and dynamically applies to each data flow the best combination of performance boosting techniques depending on the application, the

data, and the network conditions. These techniques include Adaptive TCP Flow Control, Multi-Level Compression, protocol acceleration (e.g. Common Internet File System or CIFS), and layer 4 service class policies. The AutoOptimizer Engine is an industry first, introducing a “no dials” paradigm to the WAN Optimization and Application Acceleration market.

Availability

For more information on Citrix WANScaler and the integration with Oracle E-Business Suite applications, please contact a Citrix representative at 800-393-1888 or visit the Citrix website at www.citrix.com/oracle.

With WANScaler enabled, Oracle E-Business Suite users accessing applications across high latency WAN links will see significantly improved performance due to more efficient utilization of network resources. WANScaler’s implementation of TCP Congestion Control will ensure users have more available bandwidth, and WANScalers Multi-Level Compression engine significantly reduce the amount of data being transferred across the WAN.

Support

For information on our support offerings, please call your Citrix representative at 800-393-1888 or visit the Citrix website at www.citrix.com/support.
