

# F5 NETWORKS WEBACCELERATOR INTEGRATION WITH SIEBEL CRM RELEASE 7.7

*“The world runs better with F5.”*

*F5 WebAccelerator is an advanced application delivery solution that provides superior Web application performance.*

## Product Overview

F5 Networks WebAccelerator enhances Web application performance from any location. It speeds interactive performance, improves download times for static and dynamic data, uses bandwidth more efficiently, and reduces the cost of delivering Web-enabled applications.

F5 WebAccelerator eliminates Web application delivery bottlenecks associated with remote office and extranet use. It overcomes network bottlenecks by optimizing content, eliminating freshness requests, and parallelizing interactions across the network. Application bottlenecks are crucial problems that must be resolved for Web applications to be fully functional. F5 WebAccelerator offloads the origin Web server infrastructure, by using connection pooling, Secure Sockets Layer optimization, static caching, and application smart caching. Together, these technologies reduce the load on application servers and Web servers and increase Web application responsiveness.

F5 WebAccelerator speeds Web transactions end to end, by using “application smart” technology. Application smart solutions optimize individual network object requests, connections, and end-to-end transactions from the browser to databases. For the enterprise, F5 WebAccelerator’s advanced technology results in happier users, lower bandwidth and infrastructure expenses, and a fast return on investment.

## INTEGRATED WITH

SIEBEL CUSTOMER  
RELATIONSHIP MANAGEMENT

Through the Oracle PartnerNetwork Applications Integration Initiative, partners with validated integrations are able to provide customers with standards-based vanilla product integrations, tested and validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership and greater overall satisfaction.

## Benefits

- Accelerates Web applications
- Ensures shorter response times for end users
- Extends server capacity
- Reduces system load
- Reduces network bandwidth requirements
- Supports wireless PCs and PDAs
- Offers flexible deployment options
- Reduces total cost of ownership
- Protects investment in computing environment

### Availability

The F5 WebAccelerator is available today, extending F5 Networks' Application Delivery Network solutions to deliver a secure, fast, and available application infrastructure.

F5 Networks has sales and support offices worldwide. For more information about F5 WebAccelerator, visit [www.f5.com](http://www.f5.com).

### Features

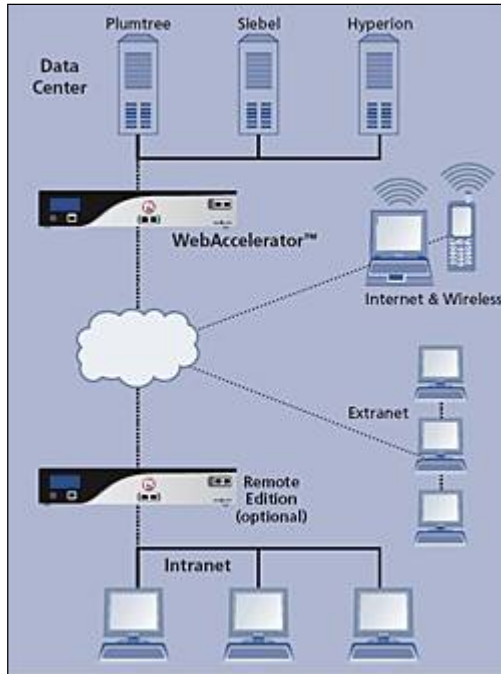

- **Parallel browser request processing:** Increases throughput of high-speed connections and improves application response time
- **Browser cache optimization:** Improves repeat-visit performance while ensuring 100 percent data accuracy
- **SSL offload processing:** Increases server capacity and accelerates high-value transactions
- **Express compress:** Reduces bandwidth use by compressing server responses to the browser
- **Connection pooling:** Reduces server processing load and protects servers from denial-of-service attacks
- **Dynamic and static object caching:** Improves performance for end users and reduces bandwidth consumption
- **Cookie hardening:** Protects sensitive application cookies from tampering or theft—common methods for circumventing application security policies or hijacking application sessions
- **Browser-based management console:** Provides centralized management and performance reporting

### Integration Details

F5 WebAccelerator is transparently installed in front of an application with no changes to the application software, infrastructure, or client access devices. This hardware solution is installed single-ended in the data center or dual-ended in branch locations.

It requires no application rewriting, tagging, or changes to source code. It is optimized for heterogeneous environments containing various combinations of applications, application servers, load balancers, routers, firewalls, and third-party security and monitoring tools.

Finally, F5 WebAccelerator requires no JavaScript, Java, cookies, or any additional changes to the user environment (PC, PDA, or smart phone).
