Oracle Business Intelligence Enterprise Edition One

- KEY BENEFITS:**
- Comprehensive BI solution for a lower TCO
 - Achieved a unified approach to defining business data.
 - Reduced time to develop a BI solution, and the overall effort in managing
 - Delivered rich and intuitive end-user experience
 - Enabled customers to meet industry compliance requirements

Milletech delivers ReARTS - Rich Analytical Solutions for Grants Management using Oracle Business Intelligence

"Our higher education customers need detailed insight into the grants management process, and Oracle BI Foundation provides us with a best-in-class BI infrastructure to enable unified business definition of our customers' heterogeneous data." – Nasir Mujawar, Vice President, Milletech Systems, Inc.

Built on a diverse technology infrastructure, Milletech Systems Inc. offers a comprehensive portfolio of software products and IT consulting services for the higher education industry. Coupled with extensive domain expertise in higher education, Milletech's IT practice leverages Oracle technology to deliver a broad spectrum of technical solutions to customers worldwide. With their flagship product ReARTS, Milletech is a proven leader in providing grants management solutions to higher education institutions.

As government compliance requirements warrant higher education institutions to be responsible and accountable for all allocated grants, higher education institutions are often faced with the challenge in choosing the appropriate tools and technologies to provide error proof, on-demand, and pervasive business intelligence to track the grant process. The tools and technologies that are currently being used for reporting and business intelligence are proven to be inadequate because of the non-pervasive nature and higher total cost of ownership.

For Milletech's customers a BI solution ultimately means delivering mission critical features such as a secure and rich end-user experience, pervasive use, intuitive report and dashboard creation user interface, and an easy method for application management. Milletech evaluated several pure-play BI vendors before choosing Oracle BI Enterprise Edition (EE) as the BI platform for their application suite.

With Oracle BI EE, Milletech was able to deliver advanced BI capabilities such as visual representation of business and financial models with granular drill down to detailed financial transactions, enterprise reporting, ad-hoc query analysis, alerts, notifications and interactive dashboards built using a single BI infrastructure.

Complete Oracle BI based solution for Grants Management

ReARTS is an Oracle Business Intelligence based ready to deploy & plug-n-play tool specifically designed for Universities' research community. This product was designed for Research Administrators to perform financial analysis, monitor financial health, compliance and provide enterprise reporting. ReARTS delivers out of the box standard regulatory reports that are accurate, consistent and reliable. ReARTS extracts various financial and transactional data, consolidates it, and allows the summarization and analysis needed by the research community. The solution covers pre-award, post-award, AR, billing activities related to expenses, cash, revenue, budgets and billing transactions.

The product has the following features:

- Built using the powerful analytical engine of Oracle BI EE with pre-built dashboard developed for the Research Community. This tool reduces the development and deployment cycle drastically and in turn reduces cost of ownership
- Customizable financial alerts and triggers such as over commitments, late reports and out of balance situations built using Oracle BI EE Delivers
- Flexible award-by-award financial variance analysis with quick turnaround time
- Role and Responsibility based reporting down to the department and sub department level built using Oracle BI EE Role based security model
- More than 500 out of the box research related reports using Oracle BI EE Answers
- Pre-built Oracle SOA based interfaces for PeopleSoft and interface capabilities with any ERP system
- Capable of performing real-time synchronization that is built on a flexible and scalable model that can be upgraded

Why Oracle?

Milletech selected Oracle BI EE for their grants management applications because of Oracle BI EE's comprehensive BI architecture, deep BI functionality, and ability to create a unified data model based on disparate systems. All these capabilities gave Milletech the desired functionality to deliver a long-term BI solution to their customers at a lower total cost of ownership.

Oracle BI EE enabled Milletech to rapidly develop and deploy a full-fledged BI solution for the grants management application within weeks dramatically reducing their development time by 200% as compared to deploying the solution using competitor's technologies.
