

Quantum Secure's Physical-Identity Management System for Oracle Identity Manager

Quantum Secure's Physical Security Policy Platform, SAFE Provides Full Physical Access Identity Lifecycle Management For Oracle Identity Manager

Quantum Secure's SAFE Physical - Identity Management System (SAFE P-IDMS™) is a market leading solution for Physical Identity & Access Management to synchronize cardholders across diverse and non-interoperable physical access control systems (PACS), biometric, RFID and smart card enabled systems. SAFE P-IDMS is a standards based, centralized, scalable and robust application providing enterprise and government customers with role-based physical access management including automated card provisioning & de-provisioning, access privilege administration, synchronization with LDAP directory and HR systems, and PKI certificate management.

SAFE platform includes physical security industry's first rules based policy management engine that allows security managers to deploy globally proven best practices for identity and event management across heterogeneous PACS and devices.

Oracle Identity Management (OIM) Platform integrated with SAFE P-IDMS provides complete end-to-end Identity & Access Management across diverse PACS infrastructure from a centralized environment. Identities created and managed within HR, ERP and IT systems can now be seamlessly & automatically administered within disjointed PACS infrastructure ensuring compliance with various regulations and enhancing security. The combined solution ensures full Identity lifecycle management in both, IT and Physical Security, domains.

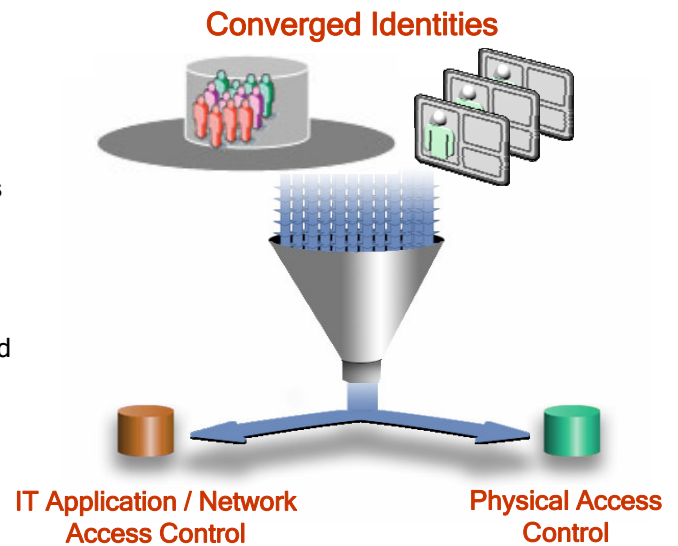

SAFE P-IDMS and OIM Combined Solution

The integrated approach will enable companies to manage, audit and correlate facility badge-in/badge-out with login/logout to IT applications/Network. Organizations can automate employee / contractor / vendor's physical access to corporate resources (building, data centers, labs, etc) based on their business roles as defined in OIM.

Prior to this integrated approach, Physical Security, HR and/or IT administrators had to manually manage personnel information and access privileges across silos of disparate multi-vendor, multi-location PACS. The integrated OIM & SAFE P-IDMS solution eliminates this labor-intensive, costly and error prone process.

The integrated solution includes SAFE OIM Agent developed by Quantum Secure as per OIM Resource Adapter Framework guidelines.

Benefits of Converged (Physical & Logical) Identity Lifecycle Management:

Seamless End-to-End Identity Management.

- Upon creation/deletion of user record in OIM, concurrently provision/de-provision user information and their physical access privileges into multi-vendor PACS worldwide
- Automatically update User information in PACS and enable OIM User Reconciliation

Role-based Physical Access Control

- Assign physical access privileges based on OIM User attributes such as role, department, location etc.

End-to-End Regulatory Compliance

- Enable segregation of duties and change management across PACS as per OIM workflow and policies
- Generate real-time global and consolidated reports from all PACS

Self-service & Delegated Administration

- Enable Physical & IT resource access request and approval process based on OIM workflow
