SYSTEM MONITORING PLUG-IN FOR MICROSOFT COMMERCE SERVER

Enterprise Manager 11g Grid Control System Monitoring Plug-in for Microsoft Commerce Server delivers comprehensive availability and performance information for Microsoft Commerce Server. By combining Microsoft Commerce Server monitoring with the richest and most comprehensive management of Oracle systems, Grid Control significantly reduces the cost and complexity of managing IT environments that have a mix of Microsoft and Oracle technologies. Administrators managing Oracle and Microsoft Commerce Server can perform proactive monitoring, while consolidating all of the management information about their entire environment in the Grid Control Console.

Realize Immediate Value through Out-of-Box Availability and Performance Monitoring

The System Monitoring Plug-in for Microsoft Commerce Server automatically collects a comprehensive set of availability and performance metrics with pre-defined thresholds, immediately alerting administrators of any issues. This allows administrators to derive instant value, while giving them the flexibility to fine-tune thresholds according to their specific operational requirements. Some of the key areas of the 120 performance indicators being monitored include Commerce Server status, catalogs, pipelines, and user profile management.

To further aid administrators with critical tasks such as problem diagnosis, trend analysis and capacity planning, the System Monitoring Plug-in for Microsoft Commerce Server includes twelve out-of-box reports, summarizing key information about Commerce Server availability, performance, and resource consumption.
Apply Grid Control’s Powerful Monitoring and Event Management Features to Microsoft Commerce Server

Enterprise Manager Grid Control System Monitoring Plug-in for Microsoft Commerce Server leverages Grid Control’s powerful monitoring and event management features for Microsoft Commerce Server monitoring, thereby delivering a robust monitoring solution through automation, standardization and “manage many-as-one” approach. Key features include:

- **Blackout Periods**: prevent unnecessary alerts from being raised during scheduled maintenance operations, such as hardware upgrades.
- **User-defined Metrics**: allow administrators to collect and monitor parameters specific to their applications.
- **Corrective Actions**: ensure that routine responses to alerts are automatically executed, thereby saving administrators time and ensuring problems are dealt with before they noticeably impact users.
- **Notification Rules, Methods and Schedules**: define when and how administrators should be notified about critical problems with their applications, ensuring quicker problem resolution.
- **Groups / Systems**: significantly simplify management of large numbers of components, allowing administrators to “manage many-as-one”.

Centralize All of the Monitoring Information in a Single Console

The System Monitoring Plug-in for Microsoft Commerce Server provides administrators managing Oracle systems and Microsoft Commerce Server with a consolidated view of the entire enterprise, enabling them to monitor and manage all of their components from a central place. In addition, the System Monitoring Plug-in for Microsoft Commerce Server complements Grid Control’s existing plug-in support for Windows systems (requires licensing of System Monitoring Plug-in for Hosts), providing administrators with more
depth and greater ability to view Microsoft Commerce Server operations directly in the context of operating system activity.

Enhance Service Modeling and Perform Comprehensive Root Cause Analysis

Grid Control’s Service Level Management functionality provides a comprehensive monitoring solution that helps IT organizations achieve high availability, performance, and optimized service levels for their business services. Administrators can monitor services from the end-users’ perspective using service tests or synthetic transactions, model relationships between services and underlying IT components, diagnose root cause of service failure, and report on achieved service levels. The System Monitoring Plug-in for Microsoft Commerce Server enables IT organizations running applications on top of Oracle and Microsoft to derive greater value from Grid Control’s Service Level Management features in a number of ways:

- **Enhanced Service Modeling**: map relationships between services and the Commerce Server instances that they rely on.
- **Complete Service Topology**: include Microsoft Commerce Server instances as part of the topology view of a service.
- **Comprehensive Root Cause Analysis**: identify or exclude Microsoft Commerce Server as the root cause of service failure.

Oracle Grid Control Delivers Unparalleled Monitoring of the Oracle Grid Environment

Oracle Grid Control is simply the most complete and robust solution for managing Oracle environments, providing the richest and most comprehensive monitoring and management for the Oracle components – from Oracle Database instances to Oracle Real Application Clusters to Oracle Application Server Farms and Clusters. In addition, to support the wide variety of applications built on Oracle, Grid Control continues to expand its monitoring scope by offering management plug-ins for non-Oracle components, such as third-party databases, third-party middleware, storage, and network devices – thus providing Oracle customers a single integrated monitoring solution for any application built on Oracle.
