Oracle's Media Workflow Management Solution is a media aware application deployed on standard Fusion Middleware with media workflows built using BPM. This solution tracks the end-to-end creation, management and movement of media assets, as well as process interactions between people and systems. Standards-based media workflow orchestration and integration remove the need for manual integration and significantly improve the ability to adapt to changing demands in media production.

Benefits:
- Real-time visibility of the media workflow process at all levels
- Proactive planning and quick response to any workflow bottlenecks that may occur
- Optimized use of resources and talent
- Effective collaboration between departments and production teams
- Increased production capacity
- Reduced time and cost to create new workflows and distribution channels

Major film entertainment and broadcast studios
Plan and manage content workflow and distribution

Several leading film entertainment studios plan, manage and operate content operations and distribution using workflow, integration tools, rights & royalties management, and tape and disk storage.

**CHALLENGES**

- Difficulty managing dynamic schedule changes as production needs change
- Difficult to manage effective and efficient assignment of resources
- Escalating production demands and costs as production processes and distribution move to digital
- Unable to effectively support new digital content launches through additional distribution platforms

**RESULTS**

- Up to 35% improvement in productivity
- Increased process control visibility
- Use of production resources optimized
- Production capacity increased
- Content production costs reduced
- Digital content delivery and digital end-to-end workflows enabled

**INDUSTRY:**
Media – Entertainment, Broadcasting

**SOLUTION COMPONENTS:**
- Oracle SOA Suite
- Oracle BPM Suite
- Oracle WebCenter Content
- Oracle WebLogic Suite
- Oracle Media Intellectual Property Management
- Oracle StorageTek
