Oracle® Content Server
Product Overview
10g Release 3 (10.1.3.3.0)

March 2007
Contributing Authors: Sandra Christiansen

The Programs (which include both the software and documentation) contain proprietary information; they are provided under a license agreement containing restrictions on use and disclosure and are also protected by copyright, patent, and other intellectual and industrial property laws. Reverse engineering, disassembly, or decompilation of the Programs, except to the extent required to obtain interoperability with other independently created software or as specified by law, is prohibited.

The information contained in this document is subject to change without notice. If you find any problems in the documentation, please report them to us in writing. This document is not warranted to be error-free. Except as may be expressly permitted in your license agreement for these Programs, no part of these Programs may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose.

If the Programs are delivered to the United States Government or anyone licensing or using the Programs on behalf of the United States Government, the following notice is applicable:

U.S. GOVERNMENT RIGHTS Programs, software, databases, and related documentation and technical data delivered to U.S. Government customers are "commercial computer software" or "commercial technical data" pursuant to the applicable Federal Acquisition Regulation and agency-specific supplemental regulations. As such, use, duplication, disclosure, modification, and adaptation of the Programs, including documentation and technical data, shall be subject to the licensing restrictions set forth in the applicable Oracle license agreement, and, to the extent applicable, the additional rights set forth in FAR 52.227-19, Commercial Computer Software--Restricted Rights (June 1987). Oracle USA, Inc., 500 Oracle Parkway, Redwood City, CA 94065.

The Programs are not intended for use in any nuclear, aviation, mass transit, medical, or other inherently dangerous applications. It shall be the licensee's responsibility to take all appropriate fail-safe, backup, redundancy and other measures to ensure the safe use of such applications if the Programs are used for such purposes, and we disclaim liability for any damages caused by such use of the Programs.

Oracle, JD Edwards, PeopleSoft, and Siebel are registered trademarks of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

The Programs may provide links to Web sites and access to content, products, and services from third parties. Oracle is not responsible for the availability of, or any content provided on, third-party Web sites. You bear all risks associated with the use of such content. If you choose to purchase any products or services from a third party, the relationship is directly between you and the third party. Oracle is not responsible for: (a) the quality of third-party products or services; or (b) fulfilling any of the terms of the agreement with the third party, including delivery of products or services and warranty obligations related to purchased products or services. Oracle is not responsible for any loss or damage of any sort that you may incur from dealing with any third party.

INTRODUCTION

OVERVIEW

Oracle® Content Server 10gR3 is made up of a variety of features, which are described in this document. These features can be further divided in the following manner:

- Document Management (page 2-1)

This section contains the following topics:

- About This Guide (page 1-1)
- Audience (page 1-1)
- Conventions (page 1-2)

ABOUT THIS GUIDE

This guide describes the feature set in Oracle® Content Server.

AUDIENCE

This guide is intended for system integrators and administrators.
CONVENTIONS

The following conventions are used throughout this guide:

- The notation `<Install_Dir>/` is used to refer to the location on your system where the content server instance is installed.

- Forward slashes (`/`) are used to separate the directory levels in a path name. A forward slash will always appear after the end of a directory name.

- Notes, technical tips, important notices, and cautions use these conventions:

<table>
<thead>
<tr>
<th>Symbols</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="Note" /></td>
<td>This is a note. It is used to bring special attention to information.</td>
</tr>
<tr>
<td><img src="image" alt="Technical Tip" /></td>
<td>This is a technical tip. It is used to identify information that can be used to make your tasks easier.</td>
</tr>
<tr>
<td><img src="image" alt="Important Notice" /></td>
<td>This is an important notice. It is used to identify a required step or required information.</td>
</tr>
<tr>
<td><img src="image" alt="Caution" /></td>
<td>This is a caution. It is used to identify information that might cause loss of data or serious system problems.</td>
</tr>
</tbody>
</table>
Chapter 2

Document Management

Overview

Document management features are the base of Oracle® Content Server.

This section contains these topics:

- Content Server (page 2-1)
  - Components (page 2-2)
  - Desktop (page 2-2)
  - Dynamic Converter (page 2-2)
  - Content Integration Suite (page 2-3)

Content Server

Content Server is the foundation for a variety of Oracle content management products. It provides a flexible, secure, centralized, web-based repository that manages all phases of the content life cycle: from creation and approval to publishing, searching, expiration, and archival or disposition. Every contributor throughout the organization can easily contribute content from native desktop applications, efficiently manage business content via rich library services, and securely access that content anywhere using a web browser.

All content, regardless of content type, is stored in the web repository or database for management, reuse and access. While stored in the repository, all types of content—ranging from e-mail, discussions, documents, reports, spreadsheets and records to images, multimedia or other digital formats—receive the same set of fundamental core services.
Components

A number of components, providing advanced functionality are provided with Content Server. These components may be rolled into the core, available to choose upon installation, or available in an “extras” directory on the CD.

Desktop

Desktop Integration Suite provides a set of embedded applications that help you seamlessly integrate your desktop experience with Content Server. More specifically, it provides convenient access to the content server from Microsoft Windows Explorer, desktop applications like Microsoft Word and Excel, and e-mail clients like Microsoft Outlook and Lotus Notes.

As a result, you can easily manage files in the content server and share files with users directly from your desktop instead of logging onto the content server and using a web browser.

Dynamic Converter

Dynamic Converter is transformation technology and on-demand publishing solution for critical business documents. With Dynamic Converter, you can easily convert any business document into a Web page for a specified audience without use of the application used to create that document. The benefits are immediate—information can be exchanged freely without the bottleneck of proprietary applications.

When a Web browser first requests a document, a set of rules are applied to determine how that document should appear as a Web page. These rules can be defined in a template, a core component of Dynamic Converter.

Dynamic Converter offers a number of benefits to the user:

- Business documents can be easily viewed in a Web browser.
- Native applications (such as Adobe Acrobat, Microsoft Word, etc.) are not required.
- Multiple renditions of a document are available for different devices (Web browsers, wireless devices, etc.)
- Templates are interchangeable with Content Publisher.
- Numerous business document types, including legacy formats, are supported.
Content Integration Suite

Content Integration Suite (CIS) enables communication with Content Server and Image Server and is deployable on a number of J2EE application servers, in addition to working in non-J2EE environments. CIS provides an interface to the fine-grained services of the servers through an object-oriented services API called the Universal Content and Process Management API (referred to as the UCPM API).

This product includes an SCS Command Layer and information about extending the SCS Command Layer. The SCS Command Layer is a set of Command Objects, implemented as Java Beans, that are built to communicate to Content Server through the content server's IDC Command interface. The SCS Command Layer is based on the J2EE “Command Design Pattern,” which means that all business logic is wrapped into a business logic bean (called a “command”) and sent to an invoker object, often implemented as a stateless session bean in a J2EE environment, for execution.
