

PILLAR DATA SYSTEMS™ AND ORACLE FUSION ACCELERATOR

BENEFITS

PILLAR DATA SYSTEMS™ AND ORACLE FUSION ACCELERATOR:

- 1-Team delivery by Pillar and Oracle 10g AS experts
- Aligns your Quality of Service to Customer Service Levels at Lower Cost
- Simplifies your storage administration for Application Administrators
- Combined technology benefits to scale as you consolidate
- Leverages Industry standard components using Oracle 10g Application Server – avoiding the closed App Server trap

Ideally suited for Oracle eBusiness Suite, Siebel, and Peoplesoft Applications, Pillar and Oracle Services have created solution that unleashes the power of 10g Application Server at a lower total cost of ownership. The Pillar Data Systems and Oracle 10g Application Server Accelerator brings real grid ready benefits to powering your Oracle Applications.

Together, Pillar and Oracle Services deliver you a Grid that truly simplifies your administration headaches and eliminates complex personnel requirements for Oracle Application administrators to better manage their storage requirements. This accelerator solution delivers Oracle Enterprise Manager ready policies that dynamically align your service levels to the Quality of Service (QoS) that your customers demand. Further, this solution will allow you to maximize your return-on-investment by leveraging auto-provisioning and deprovisioning of compute capacity, as your applications require them.

Together, Pillar and Oracle Services provide a “one-stop-shop” approach that gets you running and ready for production in the shortest time, at the lowest cost possible.

Solution Description

The Pillar Data Systems™ and Oracle Fusion Accelerator is a documented, field tested deployment methodology that combines expertise from Pillar and Oracle 10g AS Services to install and configure Oracle 10gAS technology on the Axiom storage Platform. 1-team from Oracle and Pillar Services will work with customer administration teams to assess their requirements, deploy best practices and transfer knowledge to ensure faster attainment of the combined benefits that Oracle and Pillar uniquely provide.

The Accelerator service consists of Oracle Database 10g AS in order to enable a GRID in a box by using options for Real Application Clusters (RAC) and Enterprise Manager/Grid Control technology. These technologies run with the Pillar Axiom Storage Manager in order to optimize application processes and align to the appropriate tiered storage required to meet their optimal performance levels. These separate tiers of storage are handled within one storage platform by using Pillar’s QoS storage array. The net result is a significantly reduced IT cost resulting in increased management efficiency and agility for hosting Oracle Applications. Best practices are also shared with IT staff in using these combined technologies to dynamically respond to changes in your business as service levels rise or are reduced.

DATA SHEET

CIOs and Application Administrators who are challenged with how to physically tier classes of storage to meet their Application performance requirements will benefit from this solution in the following ways: (

Oracle and Pillar Services will work with your team through all phases of Accelerator solution.

The key benefits to customers include:

- Improve management efficiencies and ease of meeting SLA's resulting in reduced people cost and fewer administration tasks
- Increase Oracle Application storage utilization and scalability resulting in better alignment of resource tiers and business requirement service levels
- Reduce 10g Application Server (RAC) deployment and ongoing maintenance cost extending the TCO savings further across the infrastructure stack
- Achieve greater scalability as you consolidate with Oracle Applications (e.g. Peoplesoft, Siebel, eBusiness Suite, JDE)
- Enable auto-provisioning capabilities for Oracle 10g Application Server within a single storage system compared to managing disk groups across multiple storage systems and disk types.

The Pillar Data Systems™ and Oracle 10g Accelerator includes support for both Storage Area Networks and Networked Attached Storage requirements. 10g AS RAC support also included for Novell SUSE and Redhat Linux..

Solution Value:

- 1 Team delivery by Pillar and Oracle 10g AS experts
- Reduced time of deployment from months to just days.
- Custom tailored for your specific business requirements
