

# TOP-DOWN APPLICATION MANAGEMENT

Manage applications, middleware, and databases with Oracle Enterprise Manager 10g Release 3

## Service-Level Management

Oracle Enterprise Manager enables business managers and IT administrators to define and model services, visualize them in topology views, set service-level goals, measure service performance, and report the status of each service against goals.

## Application Performance Management

IT administrators monitor application services from end to end, rapidly identify problems, perform root-cause analysis, and take automated corrective actions.

## Change & Configuration Management

IT managers and administrators analyze hardware and software inventory and configurations and monitor changes and compliance against security policies.

## Lifecycle Management

IT administrators automate software provisioning, patching, and cloning for databases, middleware, and applications. Out-of-the-box deployment procedures for Oracle Real Application Clusters, service-oriented architecture, Linux, and Oracle E-Business Suite, and the ability to build custom deployment procedures for any software, reduce errors, and save time and resources.
