

Innovate Faster with Oracle Database 11g

Ensure Security and Compliance

Keep data secure and ensure regulatory compliance with transparent data encryption, flashback data archive, Oracle Database Vault, and Oracle Audit Vault.

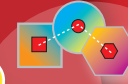

Manage All Your Information

Consolidate and integrate all your enterprise information including binary XML, RFID datatypes, DICOM medical images, 3-D spatial data, and other multimedia data into your business processes.

Manage More Data

Manage your ever-growing database storage needs more easily with advanced partitioning and data compression, and efficiently manage the lifecycle of information inside your database.

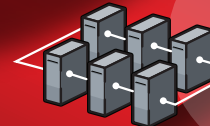

Make Changes Faster

Change with confidence and reduce the time it takes to change your IT systems with the realistic production workload testing and diagnosis capabilities of Oracle Real Application Testing.

Maximize Availability

Manage unplanned downtime from server, storage, or site failure and human error, perform online patch updates and rolling upgrades, and get more performance out of production systems using new Oracle Data Guard features.

Performance and Scalability

Deliver optimal database performance and scalability with enhancements and optimizations, including query result caches, new Oracle SecureFiles LOB storage architecture, and OLAP cube-organized materialized views.
