

WEBINAR - Modernize your Oracle Forms Applications Agenda - Friday, 28. March 2008

1:00 P.M.	Welcome & Introduction	ORACLE / PITSS
1:05 P.M.	Oracle Forms Roadmap	ORACLE - Jan Carlin Principal Product Manager Oracle Forms
1:15 P.M.	Upgrade of Oracle Forms Applications PITSS.CON Functional Overview Application Impact analysis From Oracle Forms to SOA	PITSS - Fatih Acikgöz Senior Principal Consultant
1:45 P.M.	Wrap Up and Q&A	ORACLE / PITSS
2:00 P.M.	Seminar Completion	

All times are Eastern Standard Times (EST)

Abstract:

Preserve Your Existing Forms Assets:

Oracle's continuing commitment to Forms technology enables you to upgrade and integrate existing Forms applications, preserving your Forms investment. Not only can your applications be deployed to the Web, but they can also be part of a Service-Oriented Architectural (SOA) environment built from Web services.

About PITSS:

PITSS primary objective is and has always been to protect customer investments in Oracle Forms applications. For almost 10 years PITSS enables customers to modernize their Oracle Forms applications with its integrated Oracle Forms development platform PITSS.CON.

PITSS.CON includes a comprehensive set of functionality to perform cost efficient simultaneous changes on multiple Oracle Form Modules. The unique repository approach allows analyzing and assessing the impact of changes prior to execution. Highly automated "migration-scenarios" have been the development focus since the beginning - PITSS.CON therefore provides an unmatched migration functionality to address even complex migration scenarios e.g. from client/server architectures or character-mode applications to web based architectures.
