“The integration of our Open-Utilities products with Oracle’s E-Business Suite will significantly increase the value of our technology and will provide us with a significant competitive advantage in highly potential markets”

**Tomás de Miguel,
Director of Energy &
Telecommunication
Operators, Indra
Sistemas S.A**

Indra offers value-added technological solutions in management, technology and infrastructure.

Partner Overview

Indra is the leading Spanish Information Technologies and Defense Systems Company and one of the most important in the European market with revenues of 2 000 M €(aggregate revenues at per IFRS). It has references in more than 80 countries on the five continents, approximately a third of the company’s annual revenues come from the international market. Currently 588 power plants and at 120 distribution companies use Indra Open-Utilities suite.

Integration Solution Overview

The liberalization of the European energy market has presented utility providers with a challenging environment, needing better service quality, increased levels of operational efficiency, sophisticated billing and pricing capabilities, and integration with automated meter-reading systems. Indra, by integrating its Open-Utilities suite of applications with Oracle E-Business Suite, will create a single, modular computing platform that caters to the business needs of today’s utilities and energy providers. The integrated solution will be a unique blend of Indra Open-Utilities Suite’s strong capabilities in the Utility industry and Oracle E-Business Suite’s comprehensive suite of enterprise-class business applications.

Flexible Integration

Business models have become more complex as a result of liberalisation, and increased competition. Indra’s Utility customers demand a comprehensive utilities management solution, with an efficient, streamlined, IT infrastructure that can automate and improve business processes. The integration has to meet stringent requirements such as integration with Automated Meter Reading Systems (AMR), and availability of real-time actionable information. Based on Oracle’s Fusion Middleware’s Service Oriented Architecture, the integration will deliver a comprehensive, integrated system to customers. Oracle BPEL will provide a framework to constantly automate and manage business processes wherever required.

Why Oracle?

Oracle E-Business Suite is a fully integrated, comprehensive suite of enterprise-class business applications. Oracle E-Business Suite’s Industry-specific business flows link applications together to create automated processes that match the business models of utilities providers. Indra needs to provide its customers with a complete solution, which is fast, flexible and futuristic. Oracle Fusion Middleware provides the power, flexibility and scalability that Indra’s customers are looking for. Together, Oracle and Indra will provide a comprehensive information management system for

the utility industry.

Essential Benefits

- A Comprehensive Solution for Utility customers – provides a fast and flexible way to improve efficiency, cut operating costs and optimise capital expenditure.
- A modern, modular computing platform that is proven to improve business processes.
- Easy and fast integration with emerging technologies such as AMR and Demand Management systems. Comprehensive solution for mid-market, by integrating with Oracle E-Business Suite.
