* A + sign in front of the fourth digit in the release number indicates that higher JRE/JNIT/JDK Extensions are certified. For example if this column shows 1.4.1_(03+) that means 1.4.1_04 and 1.4.1_05 will be certified as well.

** This column indicates the version of the database in which the Metadata Repository can be created using Oracle Application Server Metadata Repository Creation Assistant tool. Please visit [MetaLink](#) to get the ARU patch to be applied to use 9.2.0.6.

Note:

1. MRCA stands for Metadata Repository Configuration Assistant.
2. Oracle Container for J2EE (OC4J) standalone is certified on all the above platforms.
3. JINIT is required for Oracle Discoverer Plus.
4. OracleAS Metadata Repository Creation Assistant 10g (10.1.2.0.0) can be run on any non-IBM platform that it is certified for, to create the OracleAS Metadata Repository in an Oracle 9.2.0.6 database running on IBM AIX 5L (versions 5.2 and 5.3) system.
