Sabrix Inc.
SabrixConnection INTEGRATION
WITH ORACLE E-BUSINESS SUITE

The SabrixConnection for Oracle seamlessly connects the Sabrix Application Suite to Oracle E-Business Suite applications, providing a complete, consolidated transaction tax management solution for Oracle customers that require the determination, calculation, and reporting of U.S. sales and use tax and international value-added tax.

Sabrix Inc. Overview
Sabrix is the leading provider of consolidated transaction tax management software and services, enabling tax and IT professionals to manage sales, use, and value-added tax with consistent accuracy, control, and efficiency. Sabrix’s transaction service-oriented architecture provides a consistent way to determine, calculate, and record any transaction-related tax to manage compliance and optimize cash flows for a single application or on a global scale. Founded in 2000, Sabrix is based in California, with additional operations in North America and Europe.

Integration Overview
Corporations using Oracle Receivables 11i and Oracle Order Management 11i can integrate with the Sabrix solution to benefit from fast and accurate sales, use, and value-added tax results along with a complete audit and compliance database from which both standard and custom reports as well as returns can be generated,

- The Sabrix solution requires no manual tax decisions during transaction processing.
- The Sabrix solution’s automatic tax determination capabilities deliver a level of tax accuracy unsurpassed in the industry.
- Sabrix’s automatic tax determination provides corporate tax departments with the means to significantly improve transaction tax accuracy and reduce compliance costs by:
  - Eliminating tax decisions by sales and accounting personnel. No manual jurisdiction code or tax code assignments are required during transaction processing. This ensures both tax accuracy and appropriate accounting/GL posting.
  - Eliminating the overhead costs of maintaining address jurisdiction codes within the Oracle applications. No periodic updates are required to keep jurisdiction codes synchronized with the shifting jurisdiction definitions provided by tax authorities.

Integration Details
The SabrixConnection for Oracle Sales integrates with the tax interface that is available in Oracle Order Management and Oracle Receivables. When these modules encounter a business process that requires a call to an external tax engine, the SabrixConnection is called and initiates the communication through a simple HTTP call to the Sabrix connection server Java component running on the application server. The connection server retrieves the required data via Java Database Connectivity and then constructs and passes the XML transaction to the Sabrix tax
The SabrixConnection for Oracle Purchasing integrates with Oracle E-Business Suite by calling the Sabrix connection server Java component running on the application server. The connection server retrieves the required data via Java Database Connectivity and then constructs and passes the XML transaction to the Sabrix tax engine, which determines and calculates tax, and returns the transaction tax result. It uses the same connection server process to send and receive information to and from the Sabrix tax engine.

**SabrixConnection For Oracle Landscape**

**Environment**

**Sabrix Environment**
- Sabrix Application Suite 4.3.3
- Sabrix Connection for Oracle Sales 2.0.3.1
